Preface

FISHERIES OF THE UNITED STATES, 2010

This publication is a preliminary report for 2010 on commercial and a final report for recreational fisheries of the United States with landings from the U.S. territorial seas, the U.S. Exclusive Economic Zone (EEZ), and on the high seas. This annual report provides timely answers to frequently asked questions.

SOURCES OF DATA

Information in this report came from many sources. Field offices of the National Marine Fisheries Service (NMFS), with the generous cooperation of the coastal states and Regional Fishery Information Networks, collected and compiled data on U.S. commercial landings and processed fishery products.

The NMFS Fisheries Statistics Division in Silver Spring, MD, managed the collection and compilation of recreational statistics, in cooperation with various States and Interstate Fisheries Commissions, and tabulated and prepared all data for publication. Sources of other data appearing in this publication are: U.S. Census Bureau, U.S. Bureau of Labor Statistics, U.S. Coast Guard, U.S. Customs Service, U.S. Department of the Interior, U.S. Department of Agriculture, and the Food and Agriculture Organization (FAO) of the United Nations.

PRELIMINARY AND FINAL DATA

Data in this publication are considered to be preliminary for 2010 and are subject to revision as revised data become available. For the most current data please visit the data queries pages on the website of the NMFS Fisheries Statistics Division:

http://www.st.nmfs.noaa.gov/st1/index.html.

The Fisheries Statistics Division takes this opportunity to thank states, industry, and foreign nations who provided the data that made this publication possible. Program leaders of the field offices were: Greg Power, David Ulmer, Ted Hawes, Joan Palmer and Joan Barry for the New England, Middle Atlantic, and Chesapeake states; Scott Nelson, U.S. Geological Survey, for the Great Lakes states; David Gloeckner, Larry Beerkircher, and Jay Boulet for the South Atlantic and Gulf states; Bill Jacobson, for California; David Hamm, for Hawaii and the Pacific Islands; Geoff White and Julie Defilippi, Atlantic Coastal Cooperative Statistical Program, for Maine to Virginia; Brad Stenberg, Pacific Fisheries Information Network, for Oregon and Washington; and Robert Ryznar and Camille Kohler, Alaska Fisheries Information Network, for Alaska.

NOTES

The time series of U.S. catch by species and distance from shore included in this year's "Fisheries of the U.S." is estimated by the National Marine Fisheries Service.

As in past issues of this publication, the units of quantity and value are defined as follows unless otherwise noted: U.S. landings are shown in round weight (except mollusks which are in meat weight); quantities shown for U.S. imports and exports are in product weight, as reported by the U.S. Bureau of the Census; the value of the U.S. domestic commercial landings is exvessel; in the Review Section on important species, deflated exvessel prices are shown. The deflated value was computed using the Gross Domestic Products Implicit Price Deflator using a base year 2005; the value for U.S. imports is generally the market value in the foreign (exporting) country and, therefore, excludes U.S. import duties, freight charges and insurance from the foreign country to the United States. The value for exports is generally the value at the U.S. port of export, based on the selling price, including inland freight, insurance, and other charges. Countries and territories shown in the U.S. foreign trade section are established for statistical purposes in the Tariff Schedules of the United States Annotated (International Trade Commission) and reported by the U.S. Bureau of the Census.

SUGGESTIONS

The Fisheries Statistics Division wishes to provide the kinds of data sought by users of fishery statistics, and welcomes comments or suggestions that will improve this publication.

Address all comments or questions to:

INDEX 101

U.S. LANDINGS

Commercial landings (edible and industrial) by U.S. fishermen at ports in the 50 states were 8.2 billion pounds or 3.7 million metric tons valued at $4.5 billion in 2010—an increase of 200.0 million pounds (up 2.5 percent) and of $628.5 million (up 16 percent) compared with 2009. Finfish accounted for 84 percent of the total landings, but only 48 percent of the value. The 2010 average exvessel price paid to fishermen was 55 cents compared to 48 cents in 2009.

Catches of Alaska pollock, Pacific whiting and other Pacific groundfish that are processed at-sea aboard U.S. vessels in the northeastern Pacific are credited as "landings" to the state nearest to the area of capture. Information on landing port or percentage of catch transferred to transport ships for delivery to foreign ports is unavailable. These at-sea processed fishery products, on a round (live) weight basis, exceeded 1.1 million metric tons in 2010 and comprised 30.2 percent of the total domestic landings in the 50 states.

Commercial landings by U.S. fishermen at ports outside the 50 states along with Internal Water Processing (IWP) agreements (see glossary) provided an additional 482.9 million pounds (219,024 metric tons) valued at $274.3 million. This was an increase of 24 percent, or 92.7 million pounds (42,048 metric tons) in quantity and $103.0 million (60 percent) in value compared with 2009. Most of these landings consisted of tuna landed in American Samoa and other foreign ports.

Edible fish and shellfish landings in the 50 states were 6.5 billion pounds (2.9 million metric tons) in 2010—an increase of 328.0 million pounds (148,780 metric tons) compared with 2009.

Landings for reduction and other industrial purposes were 1.7 billion pounds (773,383 metric tons) in 2010—a decrease of 7 percent compared with 2009.

The 2010 U.S. marine recreational finfish catch (including fish kept and fish released (discarded) on the Atlantic, Gulf, and Pacific coasts was an estimated 357.4 million fish taken on an estimated 71.5 million fishing trips. The harvest (fish kept or released dead) was estimated at 142.9 million fish weighing nearly 197 million pounds.

WORLD LANDINGS

In 2009, the most recent year for which data are available, world commercial fishery landings and aquaculture production were 144.6 million metric tons—an increase of 2.1 million metric tons compared with 2008.

China was the leading nation with 34 percent of the total harvest followed by India and Peru both with 5 percent. Indonesia was the fourth leading producer with just under 5 percent and Viet Nam was fifth with 3 percent.

PRICES

The 2010 annual exvessel price index for edible fish increased by 16 percent, shellfish increased by 18 percent and industrial product increased by 17 percent compared with 2009. Exvessel price indices increased for 25 out of 32 species groups being tracked, decreased for 6 species groups, and was unchanged for one species group. The Bluefin tuna price index had the largest increase (96 percent) while the flounders price index showed the largest decrease (44 percent).

PROCESSED PRODUCTS

The estimated value of the 2010 domestic production of edible and nonedible fishery products was $9.0 billion, $757.3 million more than in 2009. The value of edible products was $8.5 billion—an increase of $774.1 million compared with 2009. The value of industrial products was $508.8 million in 2010—a decrease of $16.9 million compared with 2009.

FOREIGN TRADE

The total import value of edible and nonedible fishery products was $27.4 billion in 2010—an increase of $3.8 billion compared with 2009. Imports of edible fishery products (product weight) were 5.5 billion pounds valued at $14.8 billion in 2010—an increase of 294.8 million pounds and $1.7 billion compared with 2009. Imports of nonedible (i.e., industrial) products were $12.6 billion—an increase of $2.2 billion compared with 2009.

Total export value of edible and nonedible fishery products was $22.4 billion in 2010—an increase of $2.7 billion compared with 2009. United States firms exported 2.7 billion pounds of edible products valued at $4.4 billion—an increase of 185.4 million pounds and an increase of $399.5 million compared with 2009. Exports of nonedible products were valued at $18.0 billion, $2.3 billion more than 2009.

SUPPLY

The U.S. supply of edible fishery products (domestic landings plus imports, round weight equivalent, minus exports) was 12.3 billion pounds in 2010—an increase of 476.0 million pounds compared with 2009. The supply of industrial fishery products was 1.2 billion pounds in 2010—a decrease of 56.0 million pounds compared with 2009.

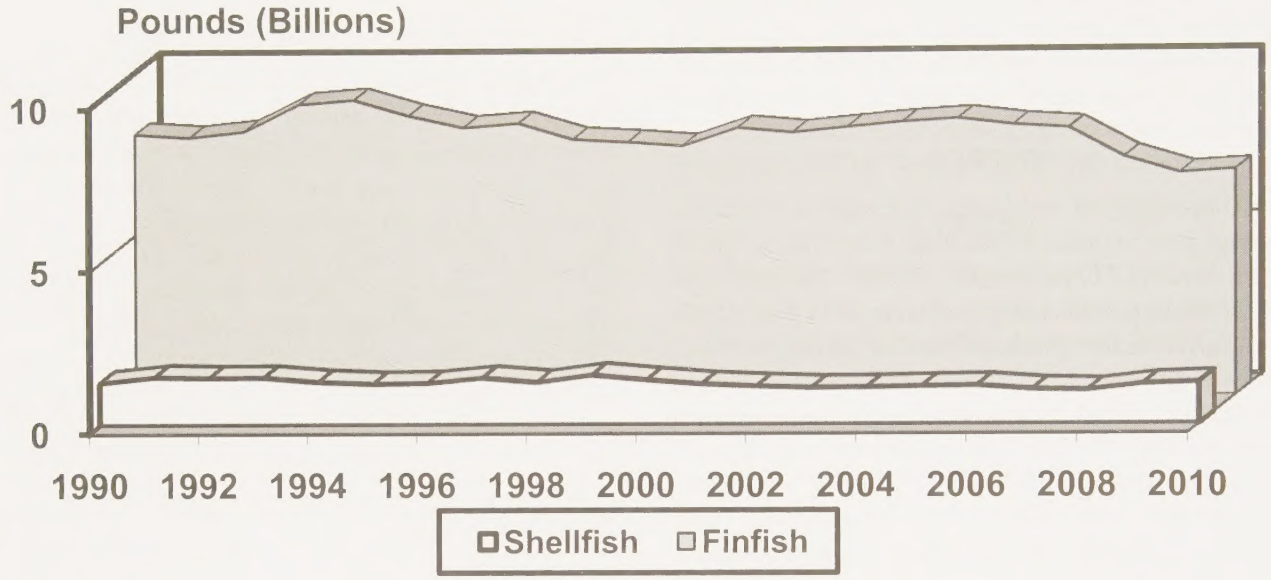
PER CAPITA CONSUMPTION

U.S. consumption of fishery products was 15.8 pounds of edible meat per person in 2010, down 0.2 pounds from the 2009 per capita consumption of 16.0 pounds.

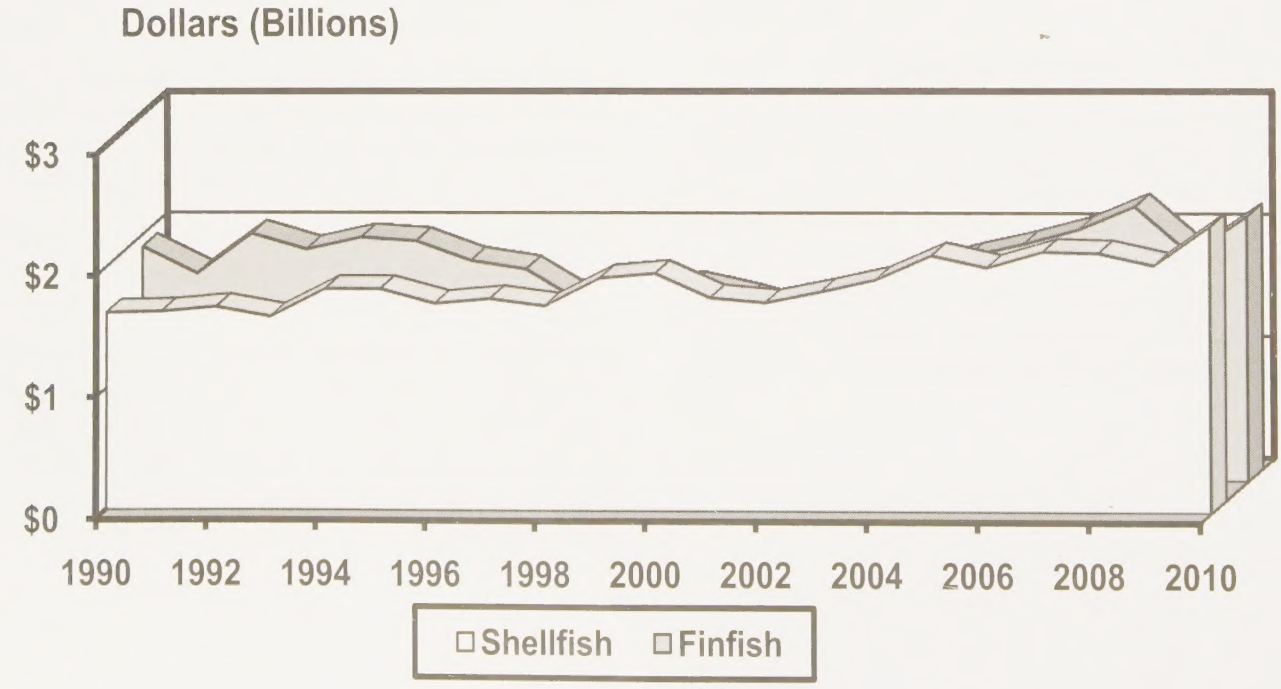
CONSUMER EXPENDITURES

U.S. consumers spent an estimated $80.2 billion for fishery products in 2010. The 2010 total includes $54.0 billion in expenditures at food service establishments (restaurants, carry-outs, caterers, etc.); $25.8 billion in retail sales for home consumption; and $432 million for industrial fish products. By producing and marketing a variety of fishery products for domestic and foreign markets, the commercial marine fishing industry contributed $41.4 billion (in value added) to the U.S. Gross National Product.

Volume of U. S. Domestic Finfish and Shellfish Landings 1990 - 2010



Value of U.S. Domestic Finfish and Shellfish Landings 1990 - 2010



Alaska led all states in volume with landings of 4.3 billion pounds; followed by Louisiana, 1.0 billion pounds; Virginia, 495.1 million pounds; California, 445.3 million pounds; and Washington, 424.1 million pounds.

Alaska led all states in value of landings with $1.6 billion; followed by Massachusetts, $478.5 million; Maine, $375.1 million; Washington, $272.3 million; and Lousiana $247.9 million.

Dutch Harbor-Unalaska, Alaska, was the leading U.S. port in quantity of commercial fishery landings, followed by: Reedville, Virginia; Empire-Venice, Louisiana; Intracoastal City, Louisiana; and Kodiak, Alaska.

New Bedford, Massachusetts was the leading U.S. port in terms of value, followed by: Dutch Harbor-Unalaska, Alaska; Kodiak, Alaska; Naknek-King Salmon, Alaska; and Cordova, Alaska.

Tuna landings by U.S.-flag vessels at ports outside the continental United States amounted to 482.9 million pounds.

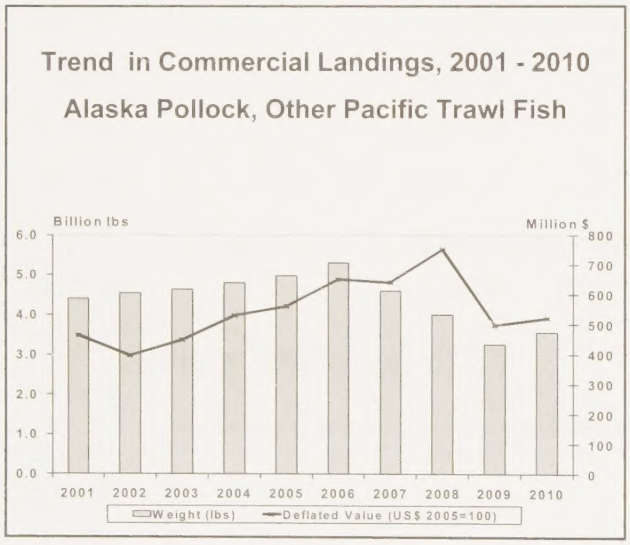
Major U.S. Domestic Species Landed in 2010
Ranked By Quantity and Value
(Numbers in thousands)

Rank	Species	Pounds	Rank	Species	Dollars
1	Pollock	1,958,936	1	Crabs	572,797
2	Menhaden	1,471,803	2	Salmon	554,816
3	Salmon	787,740	3	Scallops	456,632
4	Flatfish	624,358	4	Lobster	442,735
5	Cod	557,349	5	Shrimp	413,980
6	Hakes	378,277	6	Pollock	291,922
7	Crabs	349,604	7	Halibut	206,553
8	Squid	337,223	8	Clams	200,657
9	Shrimp	258,972	9	Cod	175,060
10	Herring (sea)	253,381	10	Flatfish	146,243

ALASKA POLLOCK AND OTHER PACIFIC TRAWL FISH

U.S. landings of Pacific trawl fish (Pacific cod, flounders, hake, Pacific ocean perch, Alaska pollock, and rockfishes) were almost 3.5 billion pounds valued at $579 million—an increase of over 9 percent in quantity and an increase of 6 percent in value compared with 2009.

Landings of Alaska pollock (1.9 billion) increased from 2009 but were almost 856.6 million pounds under their 2005 - 2009 5 - year average. Landings of Pacific cod were over 539.6 million pounds — an increase of nearly 10 percent from 491.1 million in 2009. Pacific hake (whiting) landings were over 355.3 million pounds (up more than 40 percent) valued at over $27.3 million (up almost 94 percent) compared to 2009. Landings of rockfishes were almost 39.6 million pounds (up 12 percent) and valued at nearly $17.9 million (up nearly 10 percent) compared to 2009.



ANCHOVIES

U.S. landings of anchovies were 2.8 million pounds—a decrease of 4.9 million pounds (almost 64 percent) compared with 2009. One percent of all landings were used for animal food or reduction and 99 percent were used for bait. The U.S. imports all edible anchovies.

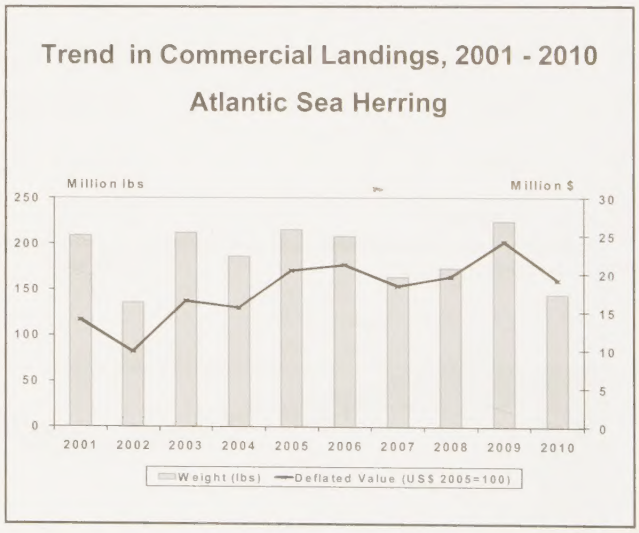
HALIBUT

U.S. landings of Atlantic and Pacific halibut were nearly 56.5 million pounds (round weight) valued at almost $206.6 million—a decrease of 3.2 million pounds (more than 5 percent) but an increase of $67.1 million (48 percent) compared with 2009. The Pacific fishery accounted for all but 46,539 pounds of the 2010 total halibut catch. The average exvessel price per pound in 2010 was $3.66 compared with $2.33 in 2009.

SEA HERRING

U.S. commercial landings of sea herring were more than 253.4 million pounds valued at over $44.6 million—a decrease of almost 59.7 million pounds (19 percent), and $11.7 million (nearly 21 percent) compared with 2009. Landings of Atlantic sea herring were over 144.5 million pounds valued at over $21.3 million—a decrease of over 79.8 million pounds (almost 36 percent), and nearly $5.3 million (nearly 20 percent) compared with 2009.

Landings of Pacific sea herring were nearly 108.9 million pounds valued at over $23.3 million—an increase of 20.1 million pounds (almost 23 percent), but a decrease of almost $6.5 million (almost 22 percent) compared with 2009. Alaska landings accounted for over 99 percent of the Pacific coast with 108.1 million pounds valued at $23 million—an increase of 21.2 million pounds (over 24 percent), but a decrease of almost $6.3 million (more than 21 percent) compared with 2009.



JACK MACKEREL

California accounted for almost 100 percent of the U.S. landings of jack mackerel in 2010. Total landings were 684,000 pounds valued at $63,000—an increase of 419,000 pounds (almost 160 percent), and $45,000 (almost 250 percent) compared with 2009. The 2010 average exvessel price per pound was 9 cents.

MACKEREL, ATLANTIC

U.S. landings of Atlantic mackerel were nearly 21.8 million pounds valued at nearly $4.4 million—a decrease of over 29.3 million pounds (over 57 percent), and nearly $5.2 million (over 54 percent) compared with 2009. Massachusetts with 12.2 million pounds and New Jersey with nearly 4.7 million pounds accounted for more than 77 percent of the total landings. The average exvessel price per pound in 2010 was 20 cents compared with 19 cents in 2009.

MACKEREL, CHUB

Landings of chub mackerel were 4.7 million pounds valued at $447,000—a decrease of 6.5 million pounds (nearly 58 percent), and $647,000 (59 percent) compared with 2009. California accounted for almost 96 percent of the total landings. The average exvessel price in 2010 was 9 cents compared with 10 cents in 2009.

MENHADEN

The U.S. menhaden landings were nearly 1.5 billion pounds valued at $107.2 million—a decrease of nearly 95.8 million pounds (6 percent), but an increase of $9.3 million (almost 10 percent) compared with 2009. Landings increased by 103.1 million pounds (almost 26 percent) in the Atlantic states, while decreasing by nearly 198.9 million pounds (17 percent) in the Gulf states compared with 2009. Landings along the Atlantic coast were nearly 504.8 million pounds valued at $41.2 million. Gulf region landings were 967 million pounds valued at $66 million.

Menhaden are used primarily for the production of meal, oil, and solubles, while small quantities are used for bait.

NORTH ATLANTIC TRAWL FISH

Landings of butterfish, Atlantic cod, cusk, flounders (winter/blackback, summer/fluke, yellowtail and other), haddock, red and white hake, ocean perch, pollock and whiting (silver hake) in the North Atlantic (combination of New England, Middle Atlantic, and Chesapeake Regions) were almost 99.6 million pounds valued at over $118.3 million—an increase of nearly 2.3 million pounds (over 2 percent), and more than $16.5 million (16 percent) compared with 2009. Of these species, flounders led in total value in the North Atlantic, accounting for over 34 percent of the total; followed by cod, nearly 24 percent; and haddock, over 18 percent.

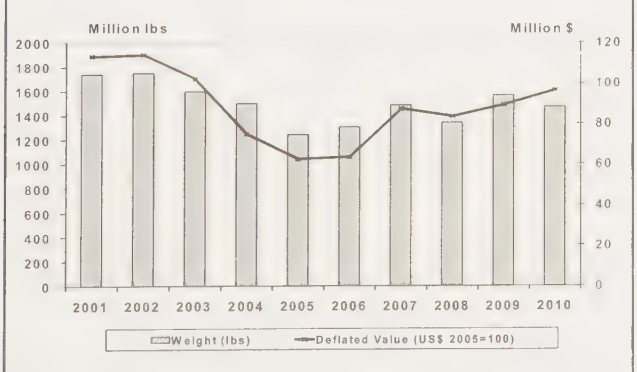
The 2010 landings of Atlantic cod were almost 17.7 million pounds valued at $28.1 million—a decrease of 2 million pounds (10 percent), but an increase of $2.9 million (over 11 percent) compared with 2009. The exvessel price per pound in 2010 was $1.59 compared with $1.28 in 2009.

Landings of yellowtail flounder were 2.9 million—a decrease of 630,000 pounds (nearly 18) from 2009 and were almost 41 percent lower than the 5-year average.

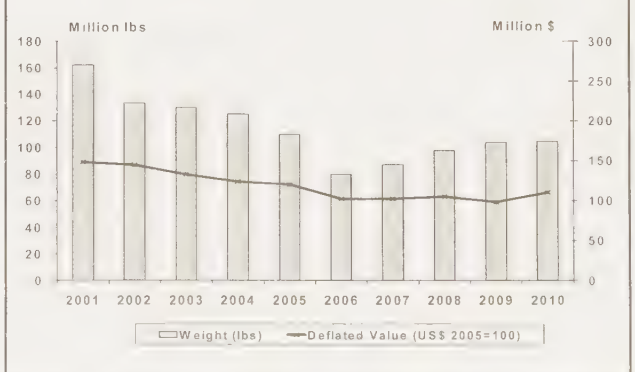
Haddock landings increased to almost 21.6 million pounds (up almost 69 percent) and almost $21.7 million (up 59 percent) compared to 2009.

North Atlantic pollock landings were more than 11.4 million pounds valued at $9.5 million—a decrease of

Trend in Commercial Landings, 2001 - 2010
Atlantic and Gulf Menhaden



Trend in Commercial Landings, 2001 - 2010
North Atlantic Trawl Fish



nearly 5.1 million pounds (nearly 31 percent), and $486,000 (nearly 5 percent) compared with 2009.

PACIFIC SALMON

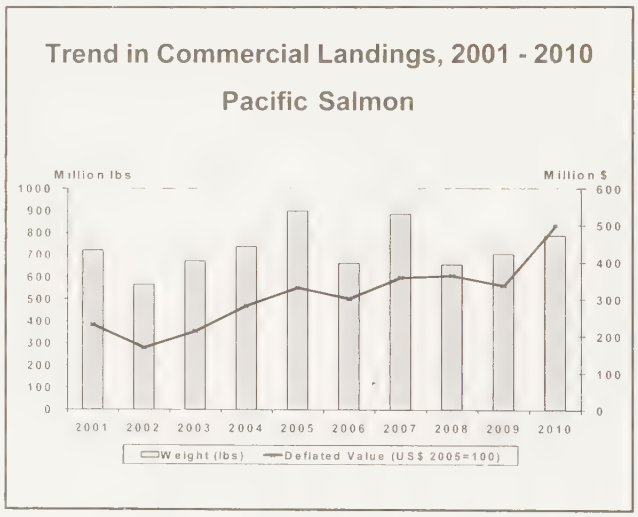
U.S. commercial landings of salmon were 787.7 million pounds valued at $554.8 million—an increase of over 82.5 million pounds (almost 12 percent) and almost $184.76 million (nearly 50 percent) compared with 2009. Alaska accounted for 96 percent of total landings; Washington, almost 4 percent. Sockeye salmon landings were 253 million pounds valued at $278.6 million—a decrease of almost 3.2 million pounds (over 1 percent), but an increase of nearly $74.3 million (over 36 percent) compared with 2009. Chinook salmon landings increased to over 13.3 million pounds-up more than 3.4 million pounds (34 percent) from 2009. Pink salmon landings were almost 372.6 million pounds-an increase of 78.7 million (nearly 27 percent); chum salmon landings were 115.6 million-an increase of 3.2 million (nearly 3 percent); and coho salmon increased to nearly 33.3 million—an increase of 326,000 (1 percent) compared with 2009.

Alaska landings were nearly 756.8 million pounds valued at almost $505.7 million—an increase of almost 85.6 million pounds (nearly 13 percent) and $161 million (almost 47 percent) compared with 2009. The distribution of Alaska salmon landings by species in 2010 was: pink, almost 372.5 million pounds (over 49 percent); sockeye, nearly 241.8 million pounds (nearly 32 percent); chum, 108 million pounds (over 14 percent); coho, 29.1 million pounds (nearly 4 percent); and chinook, nearly 5.4 million pounds (almost 1 percent). The average price per pound for all species in Alaska was 67 cents in 2010-an increase of 16 cents from 2009.

Washington salmon landings were almost 27.7 million pounds valued at $40.1 million—a decrease of nearly 3.9 million pounds (over 12 percent), but an increase of over $18.3 million (over 84 percent) compared with 2009. The biennial fishery for pink salmon went from 17 million in 2009 to 12,000 pounds in 2010. Washington landings of sockeye salmon were over 11.2 million; followed by chum, almost 7.6 million pounds (up 32 percent); chinook, over 5.3 million pounds (up nearly 56 percent); and coho, almost 3.6 million pounds (down almost 32 percent). The average exvessel price per pound for all species in Washington increased from $0.69 in 2009 to $1.45 in 2010.

Oregon salmon landings were 2.7 million pounds valued at nearly $7.7 million—an increase of 456,000 pounds (20 percent) and more than $4.1 million (117 percent) compared with 2009. Chinook salmon landings were almost 2.2 million pounds valued at $6.9 million; coho landings were 585,000 pounds valued at $824,000; sockeye landings were over 1,000 pounds valued at nearly $2,000; chum landings were 1,352 pounds valued at $901; and pink landings were less than 500 pounds valued at less than $500. The average exvessel price per pound for Chinook salmon in Oregon increased from $1.76 in 2009 to $3.18 in 2010.

California salmon landings were 261,000 pounds valued at over $1.2 million— an increase of 260,000 pounds and over $1.2 million compared with 2009. Chinook salmon were the principal species landed in the state. The average exvessel price per pound paid to fishermen in 2010 was $4.72 compared with $6.00 in 2009.



SABLEFISH

U.S. commercial landings of sablefish were over 40.3 million pounds valued at over $124.3 million—a decrease of 2.5 million pounds (nearly 6 percent) and nearly $4.3 million (over 3 percent) compared with 2009. Landings decreased in Alaska to over 25.3 million pounds- a decrease of more than 6 percent compared with 2009. Landings decreased in Washington to nearly 3.3 million pounds (down almost 6 percent) but value increased to $9.4 million (up 8 percent). The 2010 Oregon catch was almost 6.3 million pounds (down more than 13 percent), and $15 million (down almost 6 percent) compared with 2009. California landings of nearly 5.5 million pounds and more than $11.5 million represent an increase of 8 percent in quantity and almost

18 percent in value from 2009. The average exvessel price per pound in 2010 was $3.09 compared with $3.00 in 2009.

TUNA

Landings of tuna by U.S. fishermen at ports in United States, American Samoa, other U.S. territories, and foreign ports were 530.9 million pounds valued at nearly $382.8 million—an increase of almost 91.7 million pounds (nearly 21 percent) and $115 million (nearly 43 percent) compared with 2009. The average exvessel price per pound of all species of tuna in 2010 was 72 cents compared with 61 cents in 2009.

Bigeye landings in 2010 were nearly 22.9 million pounds-an increase of nearly 1.1 million pounds (5 percent) compared with 2009. The average exvessel price per pound was $2.57 in 2010, compared to $2.13 in 2009.

Skipjack landings were nearly 423.9 million pounds-an increase of over 79.3 million pounds (23 percent) compared with 2009. The average exvessel price per pound was 57 cents in 2010, compared to 44 cents in 2009.

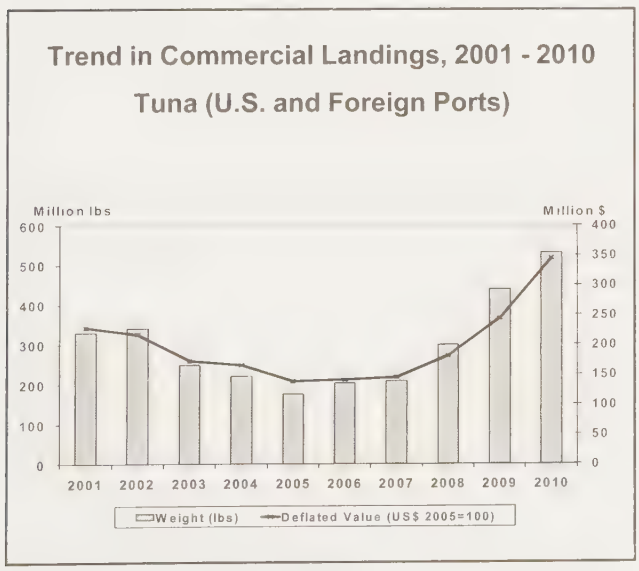
Yellowfin landings were almost 54.6 million pounds-an increase of more than 12.4 million pounds (more than 29 percent) compared with 2009. The average exvessel price per pound was 76 cents in 2010, unchanged from 2009.

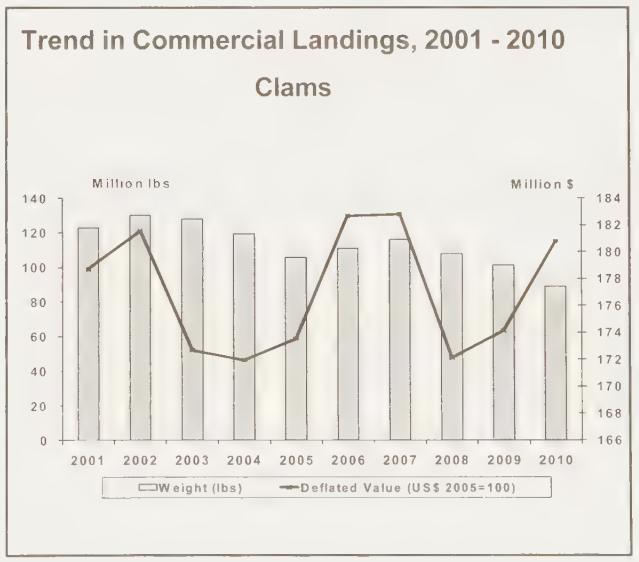
CLAMS

Landings of all species yielded nearly 88.9 million pounds of meats valued at almost $200.7 million—a decrease of over 12.2 million pounds (12 percent), but an increase of nearly $9.6 million (5 percent) compared with 2009. The average exvessel price per pound in 2010 was $2.26 compared with $1.89 in 2009.

Surf clams yielded nearly 40.8 million pounds of meats valued at $28.1 million—a decrease of 9.9 million pounds (more than 19 percent) and $6 million (almost 18 percent) compared with 2009. New Jersey was the leading state with 25.1 million pounds (down almost 24 percent compared with 2009), followed by Massachusetts, nearly 8.1 million pounds (up 75 percent); and Maryland, 3.3 million pounds (down almost 23 percent). The average exvessel price per pound of meats was 69 cents in 2010, up 2 cents from 2009.

The ocean quahog fishery produced over 35.3 million pounds of meats valued at $23.1 million—an increase of 425,000 pounds (over 1 percent) and almost $1.2 million (over 5 percent) compared with 2009. Massachusetts had landings of almost 15.6 million pounds (down over 16 percent compared with 2009) valued at $9 million (down 16 percent) while New Jersey production was more than 13.4 million pounds (up over 8 percent) valued at nearly $7.9 million (up almost 14 percent). Together, Massachusetts and New Jersey accounted for over 82 percent of total ocean quahog production in 2010. The average exvessel price per pound of meats increased from 63 cents in 2009 to 65 cents in 2010.





The hard clam fishery produced almost 4.2 million pounds of meats valued at nearly $40.9 million—a decrease of 1.5 million pounds (nearly 27 percent) and $46,000 compared with 2009. Landings in the New England region were nearly 1.8 million pounds of meats (up 10 percent); Middle Atlantic, 25,000 pounds (down over 98 percent); Chesapeake, almost 1.6 million pounds (down almost 11 percent); and the South Atlantic region, 627,000 pounds (down more than 18 percent). The average exvessel price per pound of meats increased from $7.17 in 2009 to $9.80 in 2010.

Soft clams yielded more than 4.2 million pounds of meats valued at $20.4 million—an increase of 396,000 pounds (over 10 percent) and $58,000 (0.3 percent) compared with 2009. Maine was the leading state with nearly 2.1 million pounds of meats (up nearly 9 percent), followed by Massachusetts, 1.1 million pounds (up 6 percent), and Washington, 918,000 pounds (up nearly 35 percent). The average exvessel price per pound of meats was $4.80 in 2010, compared with $5.28 in 2009.

CRABS

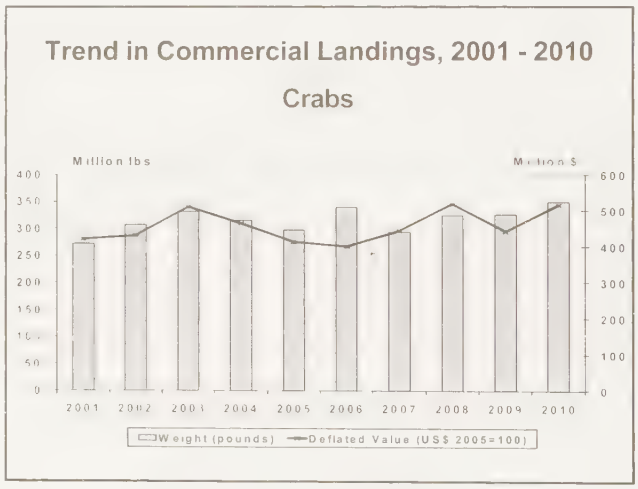
Landings of all species of crabs were 349.6 million pounds valued at nearly $572.8 million an increase of 23.4 million pounds (7 percent) and more than $87.4 million (18 percent) compared with 2009.

Hard blue crab landings were nearly 183.9 million pounds valued at nearly $211.9 million—an increase of 29.9 million pounds (more than 19 percent) and $62.8 million (42 percent) compared with 2009. Maryland landed over 34 percent of the total U.S. landings followed by: Louisiana, almost 17 percent; North Carolina, over 16 percent; and Virginia, over 15 percent. Hard blue crab landings in the Chesapeake region were 91 million pounds-an increase of almost 67 percent; the South Atlantic with 38.2 million pounds increased over 5 percent; and the Gulf region with nearly 40.9 million pounds decreased nearly 31 percent. The Middle Atlantic region with nearly 13.8 million pounds valued at almost $18.6 million had an increase of 9.8 million pounds (almost 250 percent) compared with 2009. The average exvessel price per pound of hard blue crabs was $1.15 in 2010, compared with $0.97 in 2009.

Dungeness crab landings were over 65.3 million pounds valued at $139.8 million—an increase of 2 million pounds (3 percent) and nearly $8.6 million (almost 7 percent) compared with 2009. Washington landings of almost 22.5 million pounds (up nearly 9 percent from 2009) led all states with more than 34 percent of the total landings. California landings were almost 21.7 million pounds (up 42 percent) or 33 percent of the total landings. Oregon landings were 15.8 million pounds (down almost 28 percent) and Alaska landings were almost 5.4 million pounds (down more than 4 percent). The average exvessel price per pound was $2.14 in 2010, compared with $2.07 in 2009.

U.S. landings of king crab were 24 million pounds valued at more than $122.4 million—an increase of 1.6 million pounds (more than 7 percent) and $36.2 million (42 percent) compared with 2009. The average exvessel price per pound in 2010 was $5.09 compared with $3.85 in 2009.

Snow crab landings were 47.8 million pounds valued at $54 million—a decrease of over 10.2 million pounds (18 percent) and over $25.3 million (32 percent) compared with 2009. The average exvessel price per pound was $1.13 in 2010, down from $1.37 in 2009.



LOBSTER, AMERICAN

American lobster landings were more than 115.4 million pounds valued at nearly $396.8 million—an increase of 18.5 million pounds (19 percent) and over $97.2 million (more than 32 percent) compared with 2009. Maine led in landings for the 29th consecutive year with 94.7 million pounds valued at over $313.3 million-an increase of almost 16.7 million pounds (more than 21 percent) compared with 2009. Massachusetts, the second leading producer, had landings of nearly 12.8 million pounds valued at over $50.3 million-an increase of almost 1.2 million pounds (10 percent) compared with 2009. To-

gether, Maine and Massachusetts produced 93 percent of the total national landings. The average exvessel price per pound was $3.44 in 2010, compared with $3.09 in 2009.

LOBSTER, SPINY

U.S. landings of spiny lobster were almost 6.4 million pounds valued at nearly $46 million–an increase of 1.6 million pounds (almost 35 percent) and almost $25.5 million (over 120 percent) compared with 2009. Florida, with landings of almost 5.7 million pounds valued at nearly $34.9 million, accounted for nearly 89 percent of the total catch and nearly 76 percent of the value. This was an increase of almost 1.7 million pounds (more than 41 percent) and over $22.3 million (nearly 180 percent) compared with 2009. Overall the average exvessel price per pound was $7.22 in 2010, compared with $4.32 in 2009.

OYSTERS

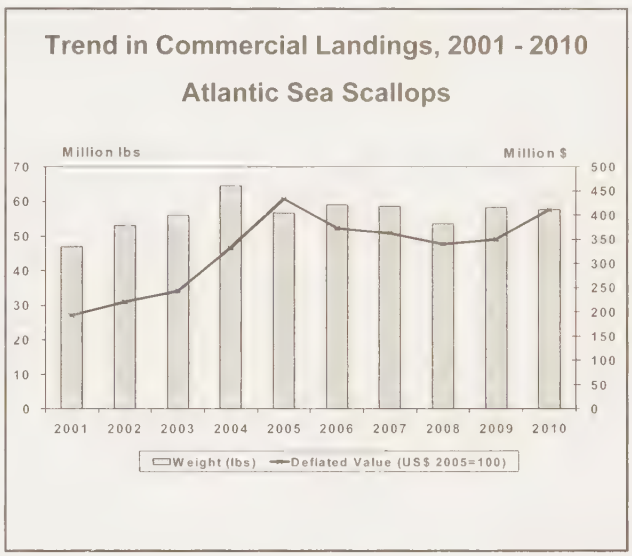
U.S. oyster landings yielded 28.1 million pounds valued at almost $117.6 million—a decrease of nearly 7.5 million pounds (21 percent) and $18.9 million (nearly 14 percent) compared with 2009. The Gulf region led in production with more than 15.5 million pounds of meats, 55 percent of the national total; followed by the Pacific Coast region with 9.9 million pounds (more than 35 percent), principally Washington, with almost 8.6 million pounds (87 percent of the region's total volume); and the South Atlantic region with more than 1.4 million pounds (5 percent). The average exvessel price per pound of meats was $4.19 in 2010, compared with $3.84 in 2009.

SCALLOPS

U.S. landings of bay and sea scallops totaled almost 57.6 million pounds valued at almost $456.6 million—a decrease of 691,000 pounds (1 percent), but an increase of $72.2 million (nearly 19 percent) compared with 2009. The average exvessel price per pound of meats increased from $6.60 in 2009 to $7.93 in 2010.

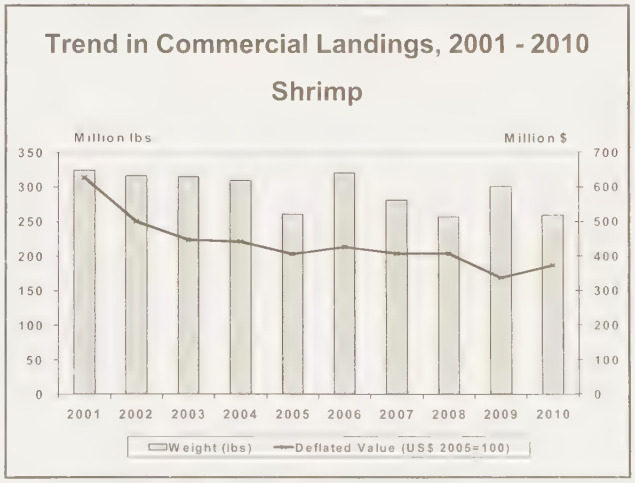
Bay scallop landings were 130,000 pounds valued at $1.5 million—a decrease of 145,000 pounds (almost 53 percent) and $692,000 (31 percent) compared with 2009. The average exvessel price per pound of meats was $11.88 in 2010, compared with $8.13 in 2009.

Sea scallop landings were 57.5 million pounds valued at $455.1 million—a decrease of 547,000 pounds (nearly 1 percent), but an increase of nearly $72.9 million (19 percent) compared with 2009. Massachusetts and New Jersey were the leading states in landings of sea scallops with 31.2 million and 14.2 million pounds of meats, respectively, representing nearly 79 percent of the national total. The average exvessel price per pound of meats in 2010 was $7.92 compared with $6.59 in 2009.



SHRIMP

U.S. landings of shrimp were 259 million pounds valued at $414 million—a decrease of 42.1 million pounds (14 percent), but an increase of $43.7 million (nearly 12 percent) compared with 2009. Shrimp landings by region were: New England up almost 160 percent; South Atlantic up more than 8 percent; Gulf down nearly 27 percent; and Pacific up 37 percent. The average



exvessel price per pound of shrimp increased to $1.60 in 2010 from $1.23 in 2009. Gulf region landings were the nation's largest with more than 176.4 million pounds and 68 percent of the national total. Texas led all Gulf states with 77.1 million pounds (down 14 percent compared with 2009); followed by Louisiana, 74.2 million pounds (down more than 32 percent); Florida West Coast, 11 million pounds (up 13 percent); Alabama, 10 million pounds (down almost 54 percent); and Mississippi, more than 4.1 million pounds (down nearly 59 percent). In the Pacific region, Oregon had landings of more than 31.4 million pounds (up more than 42 percent compared with 2009); Washington had landings of 10 million pounds (up nearly 32 percent); and California, 4.5 million pounds (up 25 percent).

SQUID

U.S. commercial landings of squid were over 337.2 million pounds valued at $97.8 million—an increase of 70.9 million pounds (almost 27 percent) and $12.8 million (15 percent) compared with 2009. California was the leading state with more than 286.4 million pounds (nearly 85 percent) and was followed by New Jersey with over 20.3 million pounds (6 percent of the national total). The Pacific Coast region landings were more than 287.4 million pounds (up 40 percent compared with 2009); followed by Middle Atlantic, nearly 25.8 million pounds (down nearly 20 percent); followed by the New England region with almost 21.7 million pounds (down 23 percent); followed by the South Atlantic region with over 1.2 million pounds (up almost 2,000 percent); and the Chesapeake region with 1 million pounds (up 33 percent). The average exvessel price per pound for squid was 29 cents in 2010, compared with 32 cents in 2009.

U.S. DOMESTIC LANDINGS, BY SPECIES, 2009 AND 2010 (1)

(1) Landings are reported in round (live) weight for all items except univalve and bivalve mollusks such as clams, oysters, scallops, which are reported in weight of meats (excluding the shell). Landings for Mississippi River drainage are not available.

(2) Data not available.

NOTE:—Data are preliminary. Landings of Alaska pollock, Pacific whiting, and other Pacific groundfish that are caught in waters off Washington, Oregon and Alaska and are processed at-sea aboard U.S. vessels are credited to the State nearest to the area of capture. Data for the current year does not include New Jersey depuration clams and Rhode Island inshore lobsters. Totals may not add due to roundings. Data do not include landings by U.S.-flag vessels at Puerto Rico and other ports outside the 50 States. Therefore, they will not agree with "U.S. Commercial Landings" beginning on page 8. Data do not include aquaculture products, except oysters and clams.

DISPOSITION OF U.S. DOMESTIC LANDINGS, 2009 AND 2010

(1) Landings are reported in round (live) weight for all items except univalve and bivalve mollusks, such as clams, oysters, and scallops, which are reported in weight of meats (excluding the shell). The National Marine Fisheries Service estimated the distance-from-shore landings for data collected by the Service and States. Includes landings from the Great Lakes and other inland waters, but excludes Mississippi River Drainage Area States.
(2) Less than 500 LB, .5 MT or $500.
NOTE:—Data are preliminary. Totals may not agree due to roundings. Data include landings by U.S.-flag vessels at Puerto Rico and other ports outside the 50 States. Therefore, they will not agree with "U.S. Commercial Landings" tables beginning on page 1. Data do not include aquaculture products, except oysters and clams.

Note:--Table may not add due to rounding. Clams, oysters and mussels are reported as meat weights (excludes shell) while all other species such as shrimp and finfishes are reported as whole (live) weights. Some clam and oyster production are reported with U.S. commercial landings. Weights and values represent the final sales of products to processors and dealers. The "Miscellaneous" category includes baitfish, ornamental/tropical fish, alligators, algae, aquatic plants, eels, scallops, crabs, and others. For many of the "Miscellaneous" species, production value but not weight, are reported.

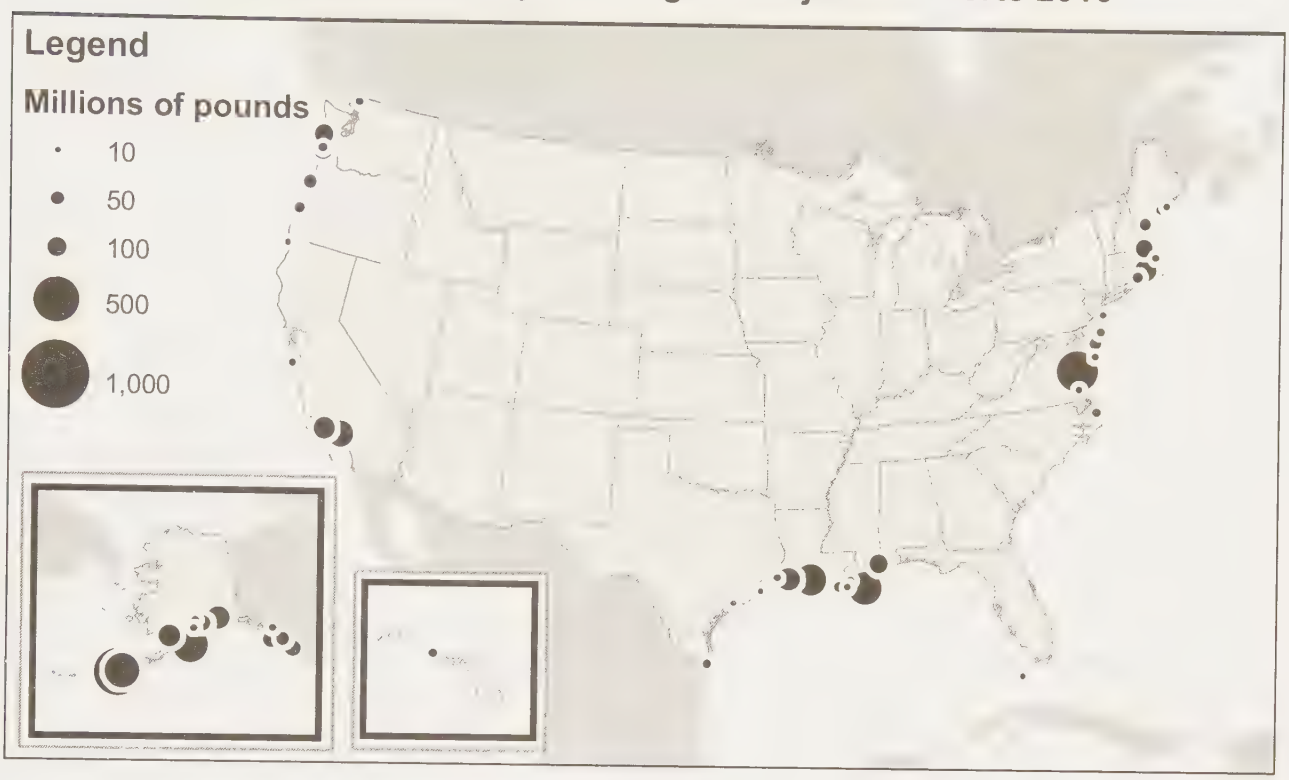
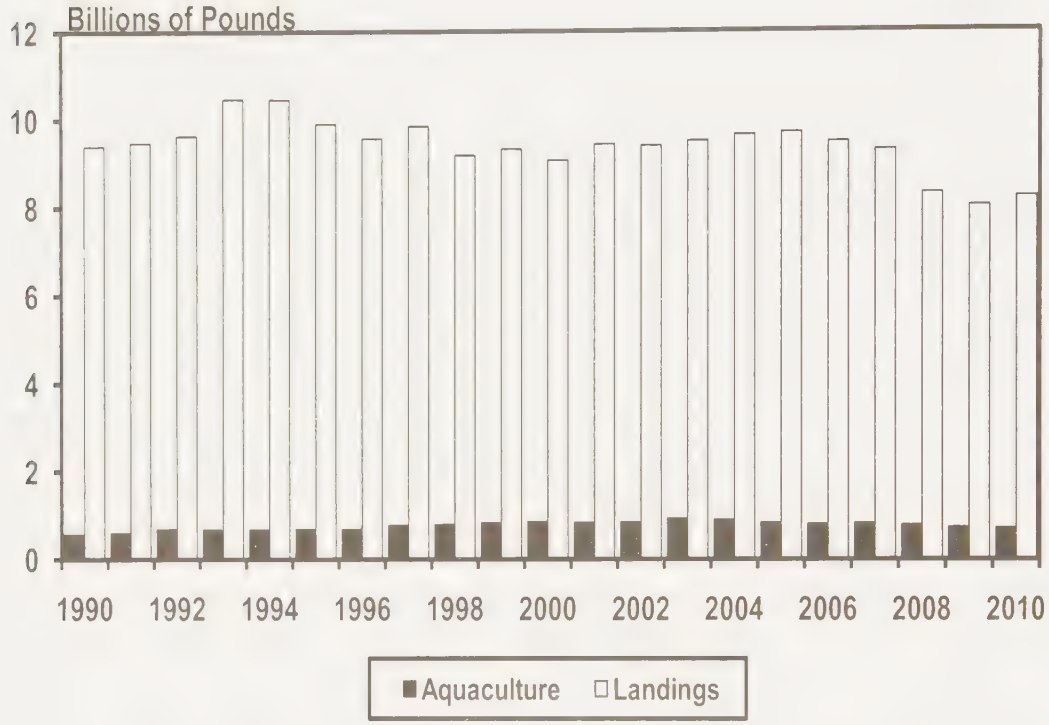
Commercial Fishery Landings at Major U.S. Ports 2010



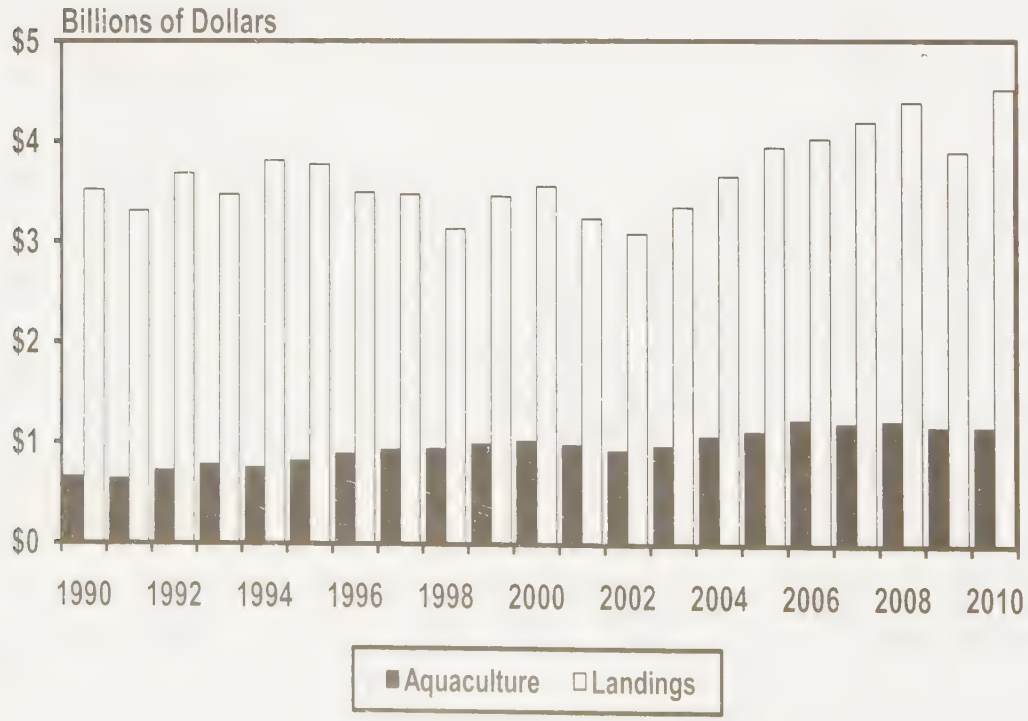
Commercial Fishery Value at Major U.S. Ports 2010

Volume of Domestic Commercial Landings and Aquaculture Production

Note: The 2010 aquaculture production is estimated

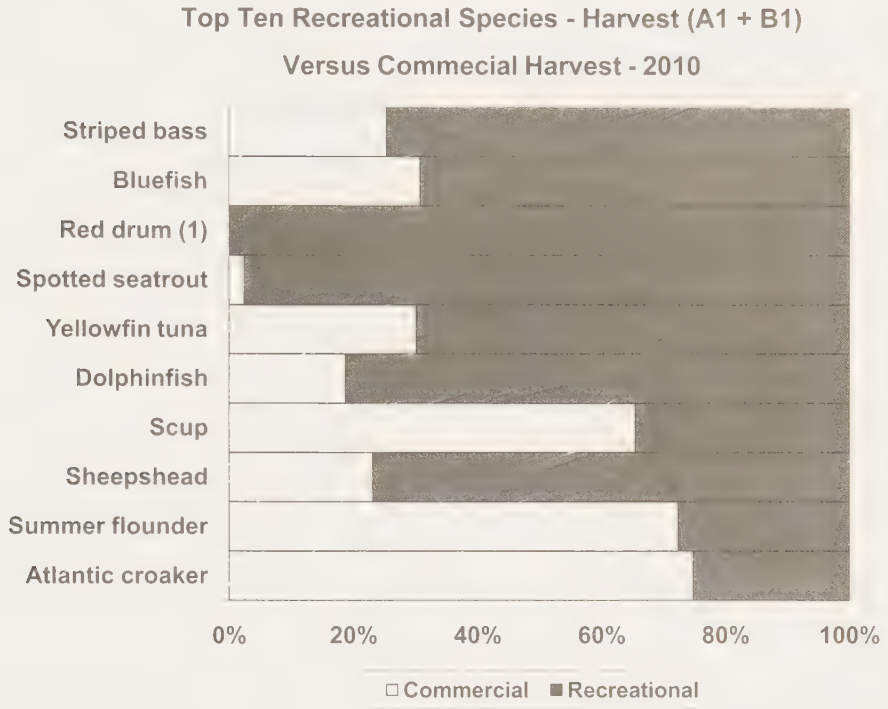


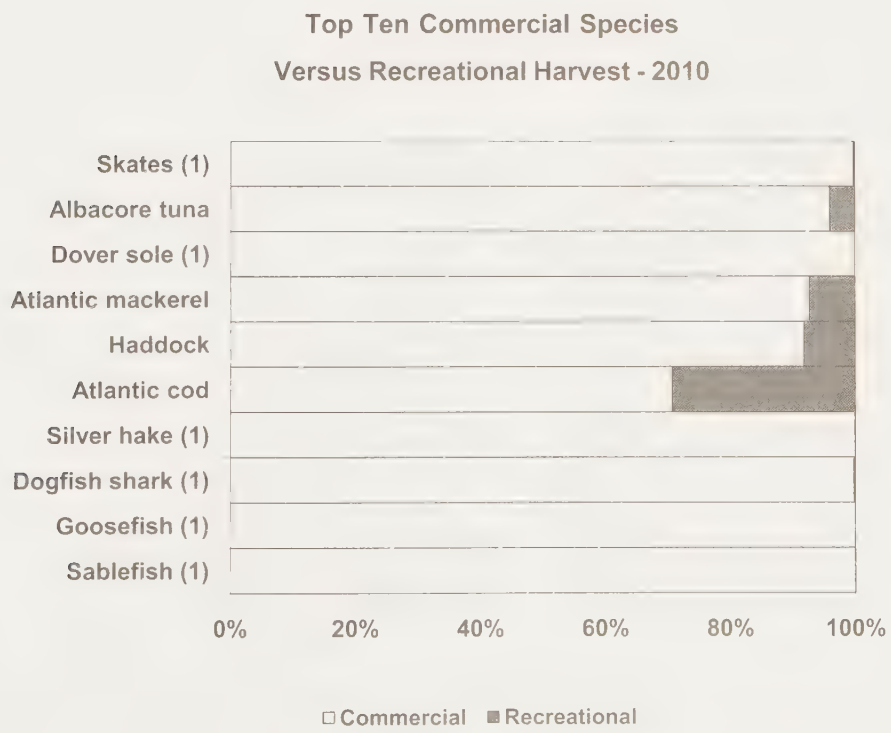
Value of Domestic Commercial Landings and Aquaculture Production



U.S. Commercial Landings

Comparisons between the top ten species by weight for U.S. commercial landings and recreational fish harvests. Does not include data for Alaska and Texas because weight data are not provided by those states. Menhaden, Pacific Hake, Atlantic Sea Herring, Pacific Sardine and Anchovy were excluded from commercial landings because they are industrial fisheries and recreational anglers do not target them.





(1) Less than 1 percent

DATA COLLECTION. Detailed information on marine recreational fishing is required to support a variety of fishery management purposes and is mandated by the Sustainable Fisheries Act, 1996 (PL 104-297) and the Magnuson-Stevens Fishery Conservation and Management Reauthorization Act of 2006 (PL 109-479). In 1981, following 2 years of preliminary surveys, the NMFS began a comprehensive survey of marine recreational fisheries covering all fishing modes (private/rental boat, party/charter boat, and shore), and including estuarine and brackish water. The fishing activities of millions of anglers are important to monitor because marine recreational fishing significantly impacts the stocks of many finfish species, and recreational catches surpass commercial landings of some species (see figure on preceding page).

METHODS. On the Atlantic and Gulf coasts of the US, the recreational fisheries statistics program consists of a coastal household telephone survey (CHTS), a telephone survey of for-hire fishing vessel operators (FHS), and a field intercept survey of completed angler fishing trips. Information obtained from state or regional logbooks is used to supplement survey data to produce more robust catch and effort estimates. The CHTS collects data on the number of marine recreational fishing trips by residents of coastal counties. The intercept survey collects data on the proportion of fishing trips by residents of non-coastal counties, angler avidity, species composition of catches, catch rates by species, and lengths and weights of landed fish. These data are combined to produce estimates of participation, catch and effort. Catch estimates are separated into two categories – harvested catch and catch released alive. Harvested catch includes landed fish and catch reported as dead. If possible, field interviewers identify, count, weigh, and measure landed fish that are available in whole form. Angler reports are obtained for catch released alive and for all other harvested catch, such as catch released dead, catch used for bait, or filleted fish. Catch estimates are stratified by subregion, state and wave (bimonthly sampling period), then further partitioned by species, fishing mode (private/rental boat, party/charter boat, and shore), primary area fished, and catch type.

On the Atlantic and Gulf coasts, and in California, effort for the party and charter boat fishing modes is estimated through For-Hire Surveys (FHS). These surveys differ from the CHTS because they use a weekly telephone survey of boats as the primary method for estimating fishing effort with directories of charter and party boats as sampling frames. The FHS estimates the number of angler-trips on boats included in the sampling frames. Dockside and onboard angler-intercept surveys collect catch data. The total catch of any one species is calculated as the product of the estimated total angler trips and the estimated mean catch per trip. Although the FHS produces separate estimates for party and charter boat on the Atlantic and Gulf coasts, for-hire fishing vessels are not designated by type in California or Puget Sound. This effort methodology was initiated in 2000 on the Gulf coast, in 2001 on the Pacific coast, and in 2005 on the Atlantic coast. FHS numbers for the Gulf Coast only include charter boats.

In Oregon and Washington, ocean boat surveys are used to produce catch and effort estimates. Oregon's Ocean Recreational Boat Survey (ORBS) and Washington's Ocean Sampling Program (OSP) consist of a field intercept survey for effort and catch of passenger and private boats. Estimates of mean catch per boat, catch per angler, total angler trips and boat trips are produced for each port inlet or port group stratified by time period and portioned by type of boat, type of trip, and water area. Catch estimates in numbers of fish and weight are produced for each species of fish.

COVERAGE. In 2010, the Recreational Fishing Statistics Program conducted by the NMFS included the Atlantic coast (ME-East FL), Gulf coast (LA-West FL), Puerto Rico, and Hawaii. Detailed information and access to the data are available on the Fisheries Statistics web page (www.st.nmfs.gov/st1). Care is advised when comparing catch estimates across an extended time series because of differences in sampling coverage through the years.

In the South Atlantic and Gulf sub-regions (NC-LA) party boat catch data have not been collected since 1985, so estimates for these sub-regions only include charter boats in the for-hire sector. Marine recreational fishing in Texas is monitored by the Texas Parks and Wildlife Department and has not been surveyed by NMFS' survey program since 1985.

Prior to 1998, ocean boat trips and salmon trips on the Pacific coast were not sampled during certain waves because they were surveyed by state natural

resource agencies. Recreational fishing data in Alaska are collected through an annual mail survey administered by the Alaska Department of Fish and Game. Harvest, effort, and participation data are included, but not available for the current year. West Pacific U.S. territories have not been included in the national survey program since 1981. Hawaii was not surveyed between 1981 and 2002. Puerto Rico was not surveyed between 1981 and 2000. Since 2004, the numbers reported for Washington and Oregon include only private boat and for-hire fisheries. Data from other NMFS and state surveys are not included in this report.

Historically, only about five percent of the annual recreational catch on the Atlantic and Gulf coasts is taken during Wave 1 (Jan/Feb). Costs to sample these months are high due to low fishing activity. Therefore, in Jan/Feb of 1981 the surveys were not conducted in any region. In 1982, Jan/Feb data collection resumed on the Pacific and Gulf coasts and the Atlantic coast of Florida. In 2004, Jan/Feb data collection resumed in North Carolina. With a few exceptions, the recreational statistics program has not collected data in Jan/Feb on the Atlantic coast north of Florida since 1980.

Time periods when the marine recreational statistics program has not been conducted: Nov/Dec (ME & NH) - 1987 to present; Mar/Apr (ME & NH) - 1986 to present; Jan/Feb (Northern CA & OR) - 1994; Jan/Feb (Southern CA & OR) – 1995; Nov/Dec (OR) - 1994; Nov/Dec (WA shore modes) - 2003; July - Dec (OR shore modes) - 2003; All Waves (CA, OR, & WA) - 1990 to 1993, 2004 to present; All Waves (WA) - 1993 to 1994.

DATA TABLES. The estimated harvests (numbers and weight of fish) for the continental U.S., Alaska, Hawaii, and Puerto Rico are presented. Harvest by weight is not available for Texas or Alaska. Numbers of fish harvested and released alive are also presented for many important species groups. Estimated harvests are presented by subregion and primary fishing area: inland [sounds, rivers, bays], state territorial seas [ocean to 3 miles from shore, except for Texas and Florida's Gulf coast where state territorial seas extend to 10 miles from shore], and Exclusive Economic Zone (EEZ) [ocean from the outer edge of the state territorial seas to 200 miles from shore]. The total numbers of estimated trips and participants are presented by state.

2010 MARINE RECREATIONAL FISHING DATA. In 2010, 10 million anglers made more than 71 million marine recreational fishing trips in the continental U.S., Alaska, Hawaii, and Puerto Rico. The estimated total marine recreational catch was more than 357 million fish, but 60 percent of the catch was released alive. The estimated total weight of harvested catch was nearly 197 million pounds. The Atlantic coast accounted for the majority of trips (almost 62 percent) and catch (over 55 percent). The Gulf coast accounted for more than 30 percent of trips, and 41 percent of the catch. The Pacific coast accounted for 4 percent of trips, and nearly 2 percent of the catch. Nationally, 66 percent (in numbers of fish) of the recreational catch came from inland waters, nearly 26 percent from state territorial seas, and 8 percent from the EEZ. The majority of Atlantic, Gulf, and Pacific trips fished primarily in inland waters.

ATLANTIC. In 2010, 6.7 million residents of Atlantic coast states participated in marine recreational fishing. All participants, including visitors, took 44 million trips and caught a total of almost 198 million fish. About 23 percent of the trips were made in east Florida, followed by 14 percent in North Carolina, almost 14 percent in New Jersey, 10 percent in New York, more than 8 percent in Massachusetts, nearly 7 percent in Maryland, and 6 percent in Virginia. Together, South Carolina, Connecticut, and Rhode Island accounted for more than 11 percent of the trips, and Georgia, Delaware, Maine, and New Hampshire accounted for the remaining percentage. The most commonly caught non-bait species (in numbers of fish) were summer flounder, bluefish, Atlantic croaker, black sea bass, and scup. The largest harvests by weight were striped bass, bluefish, Atlantic cod, dolphinfish, and scup.

Annual bluefish catch decreased overall from more than 20 million fish in 2001 to nearly 16 million fish in 2010. At nearly 16 million fish, 2010 bluefish catch was below the 10-year mean of more than 18 million. From 2001 to 2010, total annual catch of striped bass has averaged 17 million fish. Catch has fluctuated ranging from a low of more than 8.4 million fish (2010) to a high of almost 29 million fish (2006) with no clear trend. Of the total catch in 2010 (more than 8.4 million fish), almost 77 percent were released alive. The species most commonly caught on Atlantic coast trips that fished primarily in federally managed

waters were black sea bass, Atlantic cod, summer flounder, dolphinfish, and bluefish. Nearly 29 percent of the total Atlantic catch came on saltwater trips that fished primarily in the state territorial seas, and 62 percent came on trips that fished primarily in inland waters.

GULF OF MEXICO. In 2010, 2.7 million residents of Gulf coast states participated in marine recreational fishing. All participants, including visitors, took nearly 22 million trips and caught 147 million fish. Over 64 percent of the trips were made in west Florida, followed by over 17 percent in Louisiana, over 8 percent in Alabama, almost 6 percent in Mississippi, and almost 5 percent in Texas. The most commonly caught non-bait species (numbers of fish) were spotted seatrout, red drum, sand seatrout, Atlantic croaker, and Spanish mackerel. The largest harvests by weight were red drum, spotted seatrout, sheepshead, black drum, Spanish mackerel, and sand seatrout.

Over the last ten years, the total annual catch of spotted seatrout has fluctuated ranging from a low of almost 22 million fish (2001) to a high of more than 37 million fish (2006) with no clear trend. In 2010, spotted seatrout catch (almost 25 million fish) was almost 16 percent below the 10-year average of over 29 million fish. Annual catch of red drum has varied between nearly 7.6 million fish and 10 million fish over the last ten years, with an average catch of 8.8 million fish per year. Of the 9.1 million caught in 2010, nearly 5.7 million fish (over 62%) were released alive. The species most commonly caught on Gulf of Mexico trips that fished primarily in federally managed waters were red grouper, red snapper, white grunt, gag, and yellowtail snapper. More than 18 percent of the total Gulf catch came on trips that fished primarily in the state territorial seas, and almost 76 percent came on trips that fished primarily in inland waters.

PACIFIC. In 2010, 704,000 marine recreational fishing participants took 2.8 million trips and caught a total of 6.9 million fish. Almost 92 percent of the trips were made in California, followed by almost 5 percent in Oregon, and almost 4 percent in Washington. The most commonly caught non-bait species (in numbers of fish) were black rockfish, Pacific sardine, kelp bass, barred sandbass, and California lizardfish. By weight, the largest harvests were black rockfish, albacore, lingcod, Pacific halibut, Chinook salmon, and California halibut.

Annual Chinook salmon catch decreased overall from almost 929,000 fish in 2001 to over 27,000 fish in 2010. At over 27,000 fish, 2010 Chinook salmon catch was below the 10-year mean of almost 352,000. From 2001 to 2010, total annual catch of black rockfish has averaged over 816,000 fish. Catch decreased overall from more than 920,000 fish in 2001 to nearly 666,000 fish in 2010. Of the total catch in 2010 (nearly 666,000 fish), 12 percent were released alive. The most commonly caught Pacific coast species in federally managed waters were Pacific sanddab, California scorpionfish, barred sandbass, black rockfish, and Pacific barracuda. Almost 70 percent of the total Pacific catch came from trips that fished primarily in the state territorial seas, and 20 percent came from trips that fished primarily in inland waters.

ALASKA. In 2009, 380,000 marine recreational fishing participants took nearly 551,000 trips and caught a total of 2.5 million fish. Commonly caught non-bait species (in numbers of fish) included Pacific halibut, rockfishes, Pacific cod, lingcod, and salmonids: chinook, chum, coho, pink and sockeye. The most abundantly harvested salmonids were coho salmon and pink salmon. Current year statistics are not available.

HAWAII. In 2010, nearly 475,000 marine recreational participants took nearly 2.4 million trips and caught a total of 5.2 million fish. The most commonly caught non-bait species (in numbers of fish) were yellowfin tuna, skipjack tuna, convict tang, Hawaiian flagtail, and bluefin trevally. By weight, the largest harvests were yellowfin tuna, dolphinfish, skipjack tuna, wahoo, pink snapper, and blue marlin.

PUERTO RICO. In 2010, over 103,000 marine recreational participants took 536,000 trips and caught a total of almost 549,000 fish. The most commonly caught non-bait species (in numbers of fish) were dolphinfish, lane snapper, vermilion snapper, yellowtail snapper, and Mojarra family. By weight, the largest harvests were dolphinfish, lane snapper, king mackerel, wahoo, little tunny/Atlantic bonito, and Irish pompano.

Note:—Data for 2005-2008 are revised and for 2009 are preliminary. Data on imports and exports cover the international trade of 205 countries or areas. The total value of exports is consistently less than the value of imports, probably because charges for insurance, freight, and similar expenses were included in the import value, but not in the export value. The seven fishery commodity groups covered by this table are: 1. Fish, fresh, chilled or frozen; 2. Fish, dried, salted, or smoked; 3. Crustaceans and mollusks, fresh, dried, salted, etc.; 4. Fish products and preparations, whether or not in airtight containers; 5. Crustacean and mollusk products preparations, whether or not in airtight containers; 6. Oils and fats, crude or refined, of aquatic animal origin; and 7. Meals, solubles, and similar animal foodstuffs of aquatic animal origin.

FRESH AND FROZEN

FISH FILLETS AND STEAKS. In 2010 the U.S. production of raw (uncooked) fish fillets and steaks, including blocks, was 578.6 million pounds–67.2 million pounds more than the 511.4 million pounds in 2009 due primarily to large increases in cod, flounders, Alaska pollock and salmon with smaller increases in dolphinfish and tilapia. All fillets and steaks were valued at $1.4 billion. With an increase of 13.0 million pounds from the 2009 volume, Alaska pollock fillets and blocks led all species with 290 million pounds–51 percent of the total. Production of groundfish fillets and steaks (see Glossary Section-Groundfish) was 395.8 million pounds an increase of 28.3 million pounds from 2009.

FISH STICKS AND PORTIONS. The combined production of fish sticks and portions was 260.3 million pounds valued at $437.6 million compared with the 2009 production of 220.1 million pounds valued at $416.8 million. The total production of fish sticks amounted to 82.9 million pounds valued at $113.8 million. The total production of fish portions amounted to 177.4 million pounds valued at $323.8 million.

BREADED SHRIMP. The production of breaded shrimp in 2010 was 123.6 million pounds valued at $583.7 million. This represents an increase from the 2009 production of 97.1 million pounds valued at $251.6 million.

CANNED PRODUCTS

CANNED FISHERY PRODUCTS. The pack of canned fishery products in the 50 states, American Samoa, and Puerto Rico was 954.1 million pounds valued at $1.4 billion—an increase in volume of 20 million pounds and an increase in value of 4.0 million dollars compared to 2009. The 2010 pack included 656.0 million pounds with a value of $1.2 billion for human consumption and 298.1 million pounds valued at $215.8 million for bait and animal food.

CANNED SALMON. The 2010 U.S. pack of salmon was 146.4 million pounds valued at $355.9 million, increases from the 2009 levels of 141.9 million pounds valued at $322.3 million.

CANNED TUNA. The U.S. pack of tuna was 395.4 million pounds valued at $723.8 million—an increase of 26.2 million pounds in quantity and a decrease of $31.8 million in value compared with the 2009 pack. The pack of albacore tuna was 179.2 million pounds comprising 45 percent of the tuna pack in 2010. Lightmeat tuna (bigeye, bluefin, skipjack, and yellowfin) comprised the remainder with a pack of 216.3 million pounds.

CANNED CLAMS. The 2010 U.S. pack of clams (whole, minced, chowder, juice, and specialties) was 109.3 million pounds valued at $97.2 million. The pack of whole and minced clams was 24.6 million pounds. Clam chowder and clam juice was 84.6 million pounds and made up the majority of the pack.

OTHER CANNED ITEMS. The pack of pet food and bait was 298.1 million pounds valued at $215.8 million—a decrease in volume and value from the 2009 levels of 312.9 million pounds worth $217.7 million.

INDUSTRIAL FISHERY PRODUCTS

INDUSTRIAL FISHERY PRODUCTS. The value of the domestic production of industrial fishery products was $281.6 million—an decrease of $7.5 million compared with the 2009 value and below recent historical levels.

FISH MEAL. The domestic production of fish and shellfish meal was 485.5 million pounds valued at $188.6 million– an increase of 12.6 million pounds and $1.5 million compared with 2009. Most of this production was fish meal (485.4 million pounds) while shellfish meal production was 69.0 thousand pounds— a decrease of 65.0 thousand pounds from the 2009 level.

FISH OILS. The domestic production of fish oils was 136.4 million pounds (approximately 17.6 million gallons) valued at $30.1 million–decreases of 31.8 million pounds and $10.3 million in value compared with 2009 production.

OTHER INDUSTRIAL PRODUCTS. Oyster shell products, together with agar-agar, animal feeds, crab and clam shells processed for food serving, fish pellets, Irish moss extracts, kelp products, dry and liquid fertilizers, and mussel shell buttons were valued at $63.0 million.

Note:--Does not include the value of imported items that may be further processed.

IMPORTS

U.S. imports of edible fishery products in 2010 were valued at $14.8 billion, $1.7 billion more than in 2009. The quantity of edible imports was 5.5 billion pounds, 300 million pounds more than the quantity imported in 2009.

Edible imports consisted of 4.5 billion pounds of fresh and frozen products valued at $12.8 billion, 770.0 million pounds of canned products valued at $1.6 billion, 91.6 million pounds of cured products valued at $255.7 million, 5.4 million pounds of caviar and roe products valued at $30.7 million, and 63.4 million pounds of other products valued at $120.8 million.

The quantity of shrimp imported in 2010 was 1.2 billion pounds, 22.2 million pounds more than the quantity imported in 2009. Valued at $4.3 billion, shrimp imports accounted for 28.9 percent of the value of total edible imports. Imports of fresh and frozen salmon, including fillets, were 488.9 million pounds valued at $1.7 billion in 2010. Imports of fresh and frozen tuna were 426.3 million pounds, 106.5 million pounds more than the 319.8 million pounds imported in 2009. Imports of canned tuna were 442.4 million pounds, a 44.4 million pound increase over 2009. Imports of fresh and frozen fillets and steaks amounted to 1.3 billion pounds, essentially unchanged from 2009. Regular and minced block imports were 141.0 million pounds, an increase of 1.2 million pounds from 2009.

Imports of nonedible fishery products were valued at $12.6 billion, an increase of $2.2 billion compared with 2009. The total value of edible and nonedible fishery imports was $27.4 billion in 2010, $3.8 billion more than in 2009.

EXPORTS

U.S. exports of edible fishery products were 2.7 billion pounds valued at $4.4 billion, a increase of 185.4 million pounds and $399.5 million when compared with 2009. Fresh and frozen exports were 2.4 billion pounds valued at $3.7 billion, an increase of 198.3 million pounds and an increase of $445.0 million compared with 2009. In terms of individual items, fresh and frozen exports consisted principally of 356.7 million pounds of salmon valued at $591.6 million, 230.0 million pounds of surimi valued at $287.4 million and 78.5 million pounds of lobsters valued at $441.9 million.

Canned items were 166.8 million pounds valued at $248.2 million. Salmon was the major canned item exported, with 90.7 million pounds valued at $179.4 million. Cured items were 4.3 million pounds valued at $14.5 million. Caviar and roe exports were 71.5 million pounds valued at $332.2 million.

Exports of nonedible products were valued at $18.0 billion, an increase of $2.3 billion when compared with 2009. Exports of fish meal amounted to 171.2 million pounds valued at $78.7 million. The total value of edible and nonedible exports was $22.4 billion, an increase of $2.7 billion compared with 2009.

Per Capita Consumption

The NMFS calculation of per capita consumption is based on a "disappearance" model. The total U.S. supply of imports and landings is converted to edible weight and decreases in supply such as exports are subtracted out. The remaining total is divided by a population value to estimate per capita consumption. Data for the model are derived primarily from secondary sources and are subject to incomplete reporting; changes in source data or invalid model assumptions may each have a significant effect on the resulting calculation.

U.S. per capita consumption of fish and shellfish was 15.8 pounds (edible meat) in 2010. This total was 0.2 pounds less than the 16.0 pounds consumed in 2009. Per capita consumption of fresh and frozen products was 11.6 pounds, a decrease of 0.4 pounds from 2009. Fresh and frozen finfish accounted for 6.3 pounds while fresh and frozen shellfish consumption was 5.3 pounds per capita.

Consumption of canned fishery products was 3.9 pounds per capita in 2010, 0.2 pounds more than in 2009. Cured fish accounted for 0.3 pound per capita, the same as in previous years. Imports of edible seafood made up 86 percent of the consumption.

PER CAPITA USE. Per capita use is based on the supply of fishery products, both edible and non-edible (industrial), on a round-weight equivalent basis without considering beginning or ending stocks, defense purchases, or exports. The per capita use of all edible and industrial fishery products in 2010 was 63.6 pounds, up 2.1 pounds compared with 2009.

WORLD CONSUMPTION. The FAO calculation for apparent consumption is based on a disappearance model. The three year average considers, on a round weight equivalent basis, a countries landings, imports, and exports. The 2005-2007 average data indicates that the United States ranks as the third largest consumer of seafood in the world after China and Japan.

Per Capita Consumption

Annual per capita consumption of seafood products represents the pounds of edible meat consumed from domestically caught and imported fish and shellfish adjusted for exports, divided by the civilian population of the United States as of July 1 of each year.

U.S. ANNUAL PER CAPITA CONSUMPTION OF COMMERCIAL FISH AND SHELLFISH, 1910-2010

Year	Civilian resident population July 1 (1)	Per capita consumption

(1) Resident population is used for 1910 and 1920 and civilian resident population is used since 1930.

(2) Fresh and frozen fish consumption for 1910 and 1920 is estimated. Beginning in 1973, data include consumption of cultivated catfish.

(3) Canned fish consumption for 1920 is estimated. Beginning in 1921, it is based on production reports, packer stocks, and foreign trade statistics for individual years.

(4) Cured fish consumption for 1910 and 1920 is estimated.

(5) The use of beginning and ending inventories was discontinued as of 2003.

*Record years: Canned--5.8, 1936; Cured--4.0, 1909.

Note:--Data are preliminary and refer to per capita consumption of fish, crustaceans and mollusks.
Source:--Food and Agriculture Organization of the United Nations (FAO)

Per capita use of commercial fish and shellfish is based on the supply of fishery products, both edible and nonedible (industrial), on a round weight equivalent basis, without considering the beginning or ending stocks, defense purchases, or exports.

Per capita use figures are not comparable with per capita consumption data. Per capita consumption figures represent edible (for human use) meat weight consumption rather than round weight consumption. In addition, per capita consumption includes allowances for beginning and ending stocks and exports, whereas the use does not include such allowances.

Per capita use is derived by using total population including U.S. Armed Forces overseas. The per capita consumption is derived by using civilian resident population.

U.S ANNUAL PER CAPITA USE OF COMMERCIAL FISH AND SHELLFISH, 1962-2010 (1)

Year	Total population including armed forces overseas July 1	U.S. supply	Per capita utilization

CONSUMERS EXPENDITURES (& WHOLESALE PURCHASES OF INDUSTRIAL PRODUCTS) FOR FISHERY PRODUCTS:						**$80,203,239**		

(1) Includes industrial products and landings by U.S.-flag vessels at U.S. ports, foreign ports, and transfers to internal water processing vessels.

Note.-- The table reports the contribution of commercial marine fishing to the national economy as measured by margin, value added, and sales. These measures are consistent with the Bureau of the Census definitions.

Margin or mark-up is the difference between the price paid for the product by the consumer or wholesale purchaser and the dockside or wholesale value for an equivalent weight of the product. (It is assumed that fishermen catch their fish without paying purchase price and therefore the entire dockside or exvessel price is considered margin.) Value added is a measure of the factors added to the total worth of a product at each stage of the production process. It is defined as the gross receipts of firms minus the cost of purchased goods and services needed to fabricate the products. Gross National Product (GNP) is equal to the sum of the value added of all economic entities in the economy. Value added within a sector respresents that sector's contribution to GNP.

Value added includes wages, salaries, interest, depreciation, rent, taxes and profit. Consumer expenditures are the final retail value of seafood products sold through stores and food service outlets plus secondary wholesale and processing of industrial products.

The Indexes of Exvessel Prices table (to the right) presents the annual dockside price of fish and shellfish sold by fishing vessels as a percentage of the 1982 dockside price for the same species or species group. The exvessel price for each year was obtained by dividing total exvessel value for each species or group by its total quantity as reported in the U.S. commercial landings tables on pages 1 thru 4. The index for each species or group was obtained using the following formula:

$$\text{Index} = \left(\frac{\text{Current Price}}{\text{1982 Price}}\right) \times 100$$

A species of fish that sold for $0.75 a pound in 1986 and $1.00 a pound in 1982 would have an index of 75 in 1986, which means that the 1986 price was 75 percent of the 1982 price or 25 percent less than the 1982 price. If the price of the same species was $1.07 in 2000, the index in 2000 would be 107, which means that the price had increased by 7 percent between 1982 and 2000.

The figure below presents the percentage changes in the exvessel price index since 1982 for each of the following three categories: edible finfish, edible shellfish, and industrial fish. The index for each category was obtained using the following formula:

$$\text{Index} = \left(\frac{\text{Sum of (Current Prices by species} \times \text{1982 Quantities by Species)}}{\text{1982 Exvessel Value}}\right) \times 100$$

The percentage change in the price index for a category is then the difference between the index for that year and 100, where 100 is the index for 1982.

Percent Changes in the Exvessel Price Index, 2004-2010
(Change Relative to Base Year = 1982)

FISHERY PRODUCTS AND ESTABLISHMENTS INSPECTED IN CALENDAR YEAR, 2010

Region	Edible fishery products					
	Establishment (1)	Amount inspected (6)				
	In-plant (2)	Grade A (3)	PUFI (3)	No mark (4)	Lot (5)	Total
	-Average number-	Thousand pounds				
Northeast	77	19,751	66,931	235,697	21,627	344,006
Southeast	70	6,043	17,640	175,456	40,745	239,884
West	159	15,000	18,599	1,530,290	15,237	1,579,126
Total	**306**	**40,794**	**103,170**	**1,941,443**	**77,609**	**2,163,016**

(1) These establishments are inspected under contract and certified as meeting U.S. Department of Commerce (USDC) regulations for construction and maintenance of facilities and equipment processing techniques, and employment practices.

(2) Sanitarily inspected fish establishments processing fishery products under USDC inspection. As of December 2010, 162 of these were in the Hazard Analysis Critical Control Point (HACCP) Quality Management Program.

(3) Products processed under USDC inspection in inspected establishments and labeled with USDC inspection mark as "Processed Under Federal Inspection" (PUFI) and/or "U.S. Grade A."

(4) Products processed under inspection in inspected establishments but bearing no USDC inspection mark.

(5) Lot inspected and marked products checked for quality and condition at the time of examination and located in processing plants, warehouses, cold storage facilities, or terminal markets anywhere in the United States.

(6) Data include product inspected for export. Based on 2009 per capita consumption data, approximately 44 percent of seafood consumed in the U.S. is certified under the auspices of the Seafood Inspection Program.

Note:--Table may not add due to rounding.

The Magnuson-Stevens Fishery Conservation and Management Act

The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), amended on January 12, 2007 by Public Law 109-479, provides for the conservation and management of fishery resources within the U.S. Exclusive Economic Zone (EEZ). It also provides for fishery management authority over continental shelf resources and anadromous species beyond the EEZ, except when they are found within a foreign nation's territorial sea or fishery conservation zone (or equivalent), to the extent that such sea or zone is recognized by the United States.

The EEZ extends from the seaward boundary of each of the coastal States (generally 3 nautical miles from shore) to 200 nautical miles from shore. The seaward boundaries of Texas, Puerto Rico, and the Gulf coast of Florida are 3 marine leagues (9 nautical miles). The EEZ encompasses approximately 3.36 million square nautical miles.

GOVERNING INTERNATIONAL FISHERY AGREEMENT

Under the Magnuson-Stevens Act, the Secretary of State, in cooperation with the Secretary of Commerce, negotiates Governing International Fishery Agreements (GIFAs) with foreign nations requesting to fish within the EEZ. After a GIFA is signed, it is transmitted by the President to the Congress for ratification.

FOREIGN FISHING PERMITS

Title II of the Magnuson-Stevens Act governs foreign fishing in U.S. waters. The process applied to foreign fishing has been described in prior issues of this publication. As U.S. fishing capacity grew, foreign participation diminished in directed fisheries, as well as in foreign joint ventures in which U.S. vessels delivered U.S. harvested fish to permitted foreign vessels in the EEZ. Until 2001, the last directed fishing by foreign vessels occurred in 1991. However, in 2001, a small quantity of Atlantic herring was harvested by foreign vessels. The displacement of directed foreign fishing effort in the EEZ marked the achievement of one of the objectives of the Magnuson-Stevens Act: the development of the U.S. fishing industry to take what were in 1976 underutilized species.

NMFS continues to maintain certain regulations pertaining to foreign fishing should there be a situation in the future in which allowing limited foreign fishing in an underutilized fishery would be advantageous to the U.S. fishing industry.

FMPs and PMPs

Under the Magnuson-Stevens Act, eight Regional Fishery Management Councils are charged with preparing Fishery Management Plans (FMPs) for the fisheries needing management within their areas of authority. After the Councils prepare FMPs that cover domestic and foreign fishing efforts, the FMPs are submitted to the Secretary of Commerce (Secretary) for approval and implementation. The Department, through NMFS Office of Law Enforcement and the U.S. Coast Guard, is responsible for enforcing the law and regulations.

Where no FMP exists, Preliminary Fishery Management Plans (PMPs), which only cover foreign fishing efforts, are prepared by the Secretary for each fishery for which a foreign nation requests a permit. The Secretary may also prepare an FMP if a Council fails to develop one. In this latter case, the Secretary's FMP covers domestic and foreign fishing.

The Secretary may prepare FMPs in the Atlantic and Gulf of Mexico for highly migratory species. The Atlantic HMS fisheries are managed by the Secretary under the dual authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and the Atlantic Tunas Convention Act (ATCA). Atlantic tunas, Atlantic billfish, and North Atlantic swordfish are managed under the authority of both ATCA and the Magnuson-Stevens Act. South Atlantic swordfish are managed under the sole authority of ATCA. Atlantic sharks in the HMS management unit are managed under the authority of the Magnuson-Stevens Act.

Under section 304 of the Magnuson-Stevens Act, all Council-prepared FMPs must be reviewed for approval by the Secretary of Commerce. Approved FMPs are implemented by Federal regulations under section 305 of the Act. As of December 31, 2010, there are 47 FMPs in effect. Of these, one is a Secretarial FMP for Atlantic highly migratory species. The FMPs are listed below, under the responsible Council. FMPs may be amended by the Council and the amendments are submitted for approval under the same Secretarial review process as new FMPs. Most of the FMPs have been amended since initial implementation.

The Magnuson-Stevens Fishery Conservation and Management Act

Pacific Fishery Management Council
1. Pacific Coast Groundfish FMP
2. West Coast Salmon FMP
3. Coastal Pelagic Species FMP
4. U.S. West Coast Fisheries for Highly Migratory Species FMP

Western Pacific Fishery Management Council
1. American Samoa FEP
2. Pelagic FEP
3. Hawaii FEP
4. Mariana FEP
5. PRIA FEP

Mid-Atlantic Fishery Management Council
1. Spiny Dogfish FMP (joint with NEFMC)
2. Summer Flounder, Scup, and Black Sea Bass FMP
3. Surf Clam and Ocean Quahog FMP
4. Atlantic Mackerel, Squid, and Butterfish FMP
5. Atlantic Bluefish FMP
6. Tilefish FMP

South Atlantic Fishery Management Council
1. Pelagic Sargassum Habitat of the South Atlantic Region FMP
2. Snapper Grouper FMP
3. Dolphin and Wahoo FMP
4. Shrimp FMP
5. Golden Crab FMP
6. Coral, Coral Reefs, and Live/Hard Bottom Habitats of the South Atlantic Region FMP

Caribbean Fishery Management Council
1. Spiny Lobster FMP
2. Corals and Reef-Associated Plants and Invertebrates FMP
3. Queen Conch FMP
4. Shallow Water Reef Fish FMP

Gulf of Mexico Fishery Management Council
1. Coastal Pelagics FMP (joint w/ SAFMC.)
2. Coral and Coral Reefs of the GOM FMP
3. Red Drum FMP
4. Stone Crab FMP
5. Shrimp FMP
6. Spiny Lobster FMP (joint w/ SAFMC)
7. Reef Fish FMP
8. Aquaculture FMP

New England Fishery Management Council
1. Northeast Multispecies FMP
2. Northeastern Skate FMP
3. Deep Sea Red Crab FMP
4. Atlantic Herring FMP
5. Atlantic Sea Scallop FMP
6. Monkfish FMP (joint with MAFMC)
7. Atlantic Salmon FMP

North Pacific Fishery Management Council
1. Bering Sea/Aleutian Islands Groundfish FMP
2. Gulf of Alaska Groundfish FMP
3. King and Tanner Crab FMP
4. Salmon FMP
5. Alaska Scallop FMP
6. Arctic FMP

Highly Migratory Species Plans

LIBRARY INFORMATION

The NOAA Library and Information Network Catalog (NOAALINC) represents the automated bibliographic holdings of the NOAA Central Library in Silver Spring, Maryland and 27 other NOAA libraries located around the U.S. Currently, the NOAALINC contains records for more than 250,000 items with 5,000-10,000 added each year.

NOAALINC provides several search methods to locate records of items. Users can search for keywords in titles, subject headings, authors, or series. Users can browse indexes of titles, subject headings, authors, series, or call number. Each bibliographic record shows a brief description of the item with a list of which libraries hold the item. The list of libraries will show the call number, the item's specific information, and whether the item is available for circulation.

NOAALINC is available to anyone, without restriction, 24 hours a day, every day of the year. Visitors to the NOAA Central Library can access the catalog through workstations located throughout the Library. Remote users can access the catalog through a link from the NOAA Central Library's homepage at **http://www.lib.noaa.gov/**.

NOAA personnel may contact their nearest NOAA Library or the NOAA Central Library and arrange to borrow materials. Members of the general public should contact their local library to arrange for an interlibrary loan. Restrictions apply on circulation of certain materials.

For further information contact the NOAA Central Library, 1315 East-West Highway, 2nd Floor, Silver Spring, MD 20910-3282. Telephone: 301-713-2600 (Ext. 124) or E-mail: Library.Reference@noaa.gov.

SEA GRANT EXTENSION PROGRAM

The Office of Sea Grant is a major program element of the National Oceanic and Atmospheric Administration. The National Sea Grant College Program is funded jointly by the Federal Government and colleges or universities. Sea Grant's Extension Program offers a broad range of information concerning the Nation's fisheries to recreational and commercial fishermen, fish processors, and others. The following program leaders, listed alphabetically by State, can provide information on Sea Grant activities:

Leon C. Cammen
National Sea Grant Extension Leader
National Sea Grant Office/NOAA
1315 East-West Highway, Room 11841
Silver Spring, MD 20910
(301) 734-1066 FAX: 713-0799
leon.cammen@noaa.gov

Glossary

ANADROMOUS SPECIES. These are species of fish that mature in the ocean, and then ascend streams to spawn in freshwater. In the Magnuson -Stevens Act, these species include, but are not limited to, Atlantic and Pacific salmons, steelhead trout, and striped bass. See 42 FR 60682, Nov. 28, 1977.

ANALOG PRODUCTS. These include imitation and simulated crab, lobster, shrimp, scallops, and other fish and shellfish products fabricated from processed fish meat (such as surimi).

AQUACULTURE. The farming of aquatic organisms in marine, brackish or fresh water. Farming implies private or corporate ownership of the organism and enhancement of production by stocking, feeding, providing protection from predators, or other management measures. Aquaculture production is reported as the weight and value of cultured organisms at their point of final sale.

BATTER-COATED FISH PRODUCTS. Sticks and portions or other forms of fish or shellfish coated with a batter containing a leavening agent and mixture of cereal products, flavoring, and other ingredients, and partially cooked in hot oil a short time to expand and set the batter.

BOAT, OTHER. Commercial fishing craft not powered by a motor, e.g., rowboat or sailboat, having a capacity of less than 5 net tons. See motorboat.

BREADED FISH PRODUCTS. Sticks and portions or other forms of fish or shellfish coated with a non-leavened mixture containing cereal products, flavorings, and other ingredients. Breaded products are sold raw or partially cooked.

BREADED SHRIMP. Peeled shrimp coated with breading. The product may be identified as fantail (butterfly) and round, with or without tail fins and last shell segment; also known as portions, sticks, steaks, etc., when prepared from a composite unit of two or more shrimp pieces whole shrimp or a combination of both without fins or shells.

BUTTERFLY FILLET. Two skin-on fillets of a fish joined together by the belly skin. See fillets.

CANNED FISHERY PRODUCTS. Fish, shellfish, or other aquatic animals packed in cans, or other containers, which are hermetically sealed and heat-sterilized. Canned fishery products may include milk, vegetables, or other products. Most, but not all, canned fishery products can be stored at room temperature for an indefinite time without spoiling.

COMMERCIAL FISHERMAN. An individual who derives income from catching and selling living resources taken from inland or marine waters.

CONSUMPTION OF EDIBLE FISHERY PRODUCTS. Estimated amount of commercially landed fish, shellfish, and other aquatic animals consumed by the civilian population of the United States. Consumption includes U.S. production of fishery products from both domestically caught and imported fish, shellfish, other edible aquatic plants, animals, and imported products and excludes exports and purchases by the U.S. Armed Forces.

CONTINENTAL SHELF FISHERY RESOURCES. These are living organisms of any sedentary species that at the harvestable stage are either (a) immobile on or under the seabed, (b) unable to move except in constant physical contact with the seabed or subsoil of the continental shelf. The Magnuson -Stevens Act now lists them as certain abalones, surf clam and ocean quahog, queen conch, Atlantic deep-sea red crab, dungeness crab, stone crab, king crabs, snow (tanner) crabs, American lobster, certain corals, and sponges.

CURED FISHERY PRODUCTS. Products preserved by drying, pickling, salting, or smoking; not including canned, frozen, irradiated, or pasteurized products. Dried products are cured by sun or air-drying; pickled or salted products are those products preserved by applying salt, or by pickling (immersing in brine or in a vinegar or other preservative solution); smoked products are cured with smoke or a combination of smoking and drying or salting.

DEFLATED VALUE. The deflated values referred to in this document are calculated with the Gross Domestic Products Implicit Price Deflator. The base year for this index is 1987.

EDIBLE WEIGHT. The weight of a seafood item exclusive of bones, offal, etc.

EEZ. See U.S. Exclusive Economic Zone.

EL NINO. This anomalous ocean warming of the eastern Equatorial Pacific occurs at time intervals varying from 2-10 years. El Nino conditions result in an accumulation of warm water off South America which reduced the upwelling of nutrient-rich water necessary to

support fisheries production. These conditions extended northward to the U.S. Pacific Coast. In addition to affecting the food available for fish, El Nino appears to alter the normal ranges, distributions, and migrations of fish populations.

EUROPEAN UNION. EU 27 Countries: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, United Kingdom

EXPORT VALUE. The value reported is generally equivalent to f.a.s. (free alongside ship) value at the U.S. port of export, based on the transaction price, including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. The value excludes the cost of loading, freight, insurance, and other charges or transportation cost beyond the port of exportation.

EXPORT WEIGHT. The weight of individual products as exported, i.e., fillets, steaks, whole, breaded. etc. Includes both domestic and foreign re-exports data.

EXVESSEL PRICE. Price received by the harvester for fish, shellfish, and other aquatic plants and animals.

FISH BLOCKS. Regular fish blocks are frozen blocks or slabs of fillets or pieces of fillets cut or sliced from fish. Minced fish blocks are frozen blocks or slabs of minced flesh produced by a meat and bone separating machine.

FISH FILLETS. The sides of fish that are either skinned or have the skin on, cut lengthwise from the backbone. Most types of fillets are boneless or virtually boneless; some may be labeled as "boneless fillets."

FISH MEAL. A high-protein animal feed supplement made by cooking, pressing, drying, and grinding fish or shellfish.

FISH OIL. An oil extracted from body (body oil) or liver (liver oil) of fish and marine mammals; mostly a byproduct of fish meal production.

FISH PORTION. A piece of fish flesh that is generally of uniform size with thickness of 3/8 of an inch or more and differs from a fish stick in being wider or of a different shape. A fish portion is generally cut from a fish block.

FISH SOLUBLES. A water-soluble protein byproduct of fish meal production. Fish solubles are generally condensed to 50 percent solids and marketed as "condensed fish solubles."

FISH STEAK. A cross-section slice cut from a large dressed fish. A steak is usually about 3/4 of an inch thick.

FISH STICK. An elongated piece of breaded fish flesh weighing not less than 3/4 of an ounce and not more than 1-1/2 ounces with the largest dimension at least three times that of the next largest dimension. A fish stick is generally cut from a fish block.

FISHERY MANAGEMENT PLAN (FMP). A plan developed by a Regional Fishery Management Council, or the Secretary of Commerce under certain circumstances, to manage a fishery resource in the U.S. EEZ pursuant to the MFCMA (Magnuson Act).

FISHING CRAFT, COMMERCIAL. Boats and vessels engaged in capturing fish, shellfish, and other aquatic plants and animals for sale.

FULL-TIME COMMERCIAL FISHERMAN. An individual who receives more than 50 percent of his or her annual income from commercial fishing activities, including port activity, such as vessel repair and re-rigging.

GROUNDFISH. Broadly, fish that are caught on or near the sea floor. The term includes a wide variety of bottom fishes, rockfishes, and flatfishes. However, NMFS sometimes uses the term in a narrower sense. In "Fisheries of the United States," the term applies to the following species--Atlantic and Pacific: cod, hake, ocean perch, and pollock; cusk; and haddock.

IMPORT VALUE. Value of imports as appraised by the U.S. Customs Service according to the Tariff Act of 1930, as amended. It may be based on foreign market value, constructed value, American selling price, etc. It generally represents a value in a foreign country, and therefore excludes U.S. import duties, freight, insurance, and other charges incurred in bringing the merchandise to the United States.

IMPORT WEIGHT. The weights of individual products as received, i.e., fillets, steaks, whole, headed, etc.

INDUSTRIAL FISHERY PRODUCTS. Items processed from fish, shellfish, or other aquatic plants and animals that are not consumed directly by humans. These items contain products from seaweeds, fish meal, fish oils, fish solubles, pearl essence, shark and other aquatic animal skins, and shells.

INTERNAL WATER PROCESSING (IWPs). An operation in which a foreign vessel is authorized by the governor of a state to receive and process fish in the internal waters of a state. The Magnuson Act refers to internal waters as all waters within the boundaries of a state except those seaward of the baseline from which the territorial sea is measured.

JOINT VENTURE. An operation authorized under the (Magnuson -Stevens Act) in which a foreign vessel is authorized to receive fish from U.S. fishermen in the U.S. EEZ. The fish received from the U.S. vessel are part of the U.S. harvest.

LANDINGS, COMMERCIAL. Quantities of fish, shellfish, and other aquatic plants and animals brought ashore and sold. Landings of fish may be in terms of round (live) weight or dressed weight. Landings of crustaceans are generally on a live-weight basis except for shrimp which may be on a heads-on or heads-off basis. Mollusks are generally landed with the shell on, but for some species only the meats are landed, such as sea scallops. Data for all mollusks are published on a meat-weight basis.

MAGNUSON-STEVENS FISHERY CONSERVATION AND MANAGEMENT ACT, Public Law 94-265, as amended. The Magnuson-Stevens Act provides a national program for the conservation and management of fisheries to allow for an optimum yield (OY) on a continuing basis and to realize the full potential of the Nation's fishery resources. It established the U.S. Exclusive Economics Zone (EEZ) (formerly the FCZ - Fishery Conservation Zone) and a means to control foreign and certain domestic fisheries through PMPs and FMPs. Within the U.S. EEZ, the United States has exclusive management authority over fish (meaning finfish, mollusks, crustaceans, and all other forms of marine animal and plant life other than marine mammals, birds, and highly migratory species of tuna). The Magnuson Act provides further exclusive management authority beyond the U.S. EEZ for all continental shelf fishery resources and all anadromous species throughout the migratory range of each such species, except during the time they are found within any foreign nation's territorial sea or fishery conservation zone (or the equivalent), to the extent that such a sea or zone is recognized by the United States.

MARINE RECREATIONAL FISHING. Fishing for pleasure, amusement, relaxation, or home consumption.

MARINE RECREATIONAL CATCH. Quantities of finfish, shellfish, and other living aquatic organisms caught, but not necessarily brought ashore, by marine recreational fisherman.

MARINE RECREATIONAL FISHERMEN. Those people who fish in marine waters primarily for recreational purposes. Their catch is primarily for home consumption, although occasionally a part or all of their catch may be sold and enter commercial channels. This definition is used in the NMFS Marine Recreational Fishery Statistics Survey, and is not intended to represent a NMFS policy on the sale of angler-caught fish.

MAXIMUM SUSTAINABLE YIELD (MSY). MSY from a fishery is the largest annual catch or yield in terms of weight of fish caught by both commercial and recreational fishermen that can be taken continuously from a stock under existing environmental conditions. A determination of MSY, which should be an estimate based upon the best scientific information available, is a biological measure necessary in the development of optimum yield.

METRIC TONS. A measure of weight equal to 1,000 kilograms, 0.984 long tons, 1.1023 short tons, or 2,204.6 pounds.

MOTORBOAT. A motor-driven commercial fishing craft having a capacity of less than 5 net tons, or not officially documented by the Coast Guard. See "boat, other".

NORTHWEST ATLANTIC FISHERIES ORGANIZATION (NAFO). This convention, entered into force January 1, 1979, replaces ICNAF. NAFO provides a forum for continued multilateral scientific research and investigation of fishery resources that occur beyond the limits of coastal nations' fishery jurisdiction in the northwest Atlantic, and will ensure consistency between NAFO management measures in this area and those adopted by the coastal nations within the limits of their fishery jurisdiction.

OPTIMUM YIELD (OY). In the MFCMA (Magnuson Act), OY with respect to the yield from a fishery, is the amount of fish that (1) will provide the greatest overall benefit to the United States, with particular reference to food production and recreational opportunities; and (2) is prescribed as such on the basis of maximum sustainable yield from such fishery, as modified by any relevant ecological, economic, or social factors.

PART-TIME COMMERCIAL FISHERMAN. An individual who receives less than 50 percent of his or her annual income from commercial fishing activities.

PER CAPITA CONSUMPTION. Consumption of edible fishery products in the United States divided by the total civilian population. In calculating annual per capita consumption, estimates of the civilian resident population of the United States on July 1 of each year are used. These estimates are taken from current population reports, published by the U.S. Bureau of the Census.

PER CAPITA USE. The use of all fishery products, both edible and nonedible, in the United States divided by the total population of the United States.

PRELIMINARY FISHERY MANAGEMENT PLAN (PMP). The Secretary of Commerce prepares a PMP whenever a foreign nation with which the United States has made a Governing International Fishery Agreement (GIFA) submits an application to fish in a fishery not managed by an FMP. A PMP is replaced by an FMP as soon as the latter is implemented. A PMP applies only to foreign fishing.

RE-EXPORTS. Re-exports are commodities which have entered the U.S. as imports and are subsequently exported in substantially the same condition as when originally imported.

RETAIL PRICE. The price of fish and shellfish sold to the final consumer by food stores and other retail outlets.

ROUND (LIVE) WEIGHT. The weight of fish, shellfish, or other aquatic plants and animals as taken from the water; the complete or full weight as caught. The tables on world catch found in this publication include, in the case of mollusks, the weight of both the shells and the meats, whereas the tables on U.S. landings include only the weight of the meats.

SURIMI. Minced fish meat (usually Alaska pollock) which has been washed to remove fat and undesirable matters (such as blood, pigments, and odorous substances), and mixed with cryoprotectants, such as sugar and/or sorbitol, for a good frozen shelf life.

TOTAL ALLOWABLE LEVEL OF FOREIGN FISHING (TALFF). The TALFF, if any, with respect to any fishery subject to the exclusive fishery management authority of the United States, is that portion of the optimum yield of such fishery which will not be harvested by vessels of the United States, as determined by provisions of the MFCMA.

U.S. EXCLUSIVE ECONOMIC ZONE (EEZ). The MSFCMA (Magnuson-Stevens Act) defines this zone as contiguous to the territorial sea of the United States and extending seaward 200 nautical miles measured from the baseline from which the territorial sea is measured. This was formerly referred to as the FCZ (Fishery Conservation Zone).

U.S.-FLAG VESSEL LANDINGS. Includes landings by all U.S. fishing vessels regardless of where landed as opposed to landings at ports in the 50 United States. These include landings at foreign ports, U.S. territories, and foreign vessels in the U.S. FCZ under joint venture agreements. U.S. law prohibits vessels constructed or registered in foreign countries to land fish catches at U.S. ports.

U.S. TERRITORIAL SEA. A zone extending 3 nautical miles from shore for all states except Texas and the Gulf Coast of Florida where the seaward boundary is 3 marine leagues (9 nautical miles)

USE OF FISHERY PRODUCTS. Estimated disappearance of the total supply of fishery products, both edible and nonedible, on a round-weight basis without considering beginning or ending stocks, exports, military purchases, or shipments to U.S. territories.

VESSEL. A commercial fishing craft having a capacity of 5 net tons or more. These craft are either enrolled or documented by the U.S. Coast Guard and have an official number assigned by that agency.

WHOLESALE FISH AND SHELLFISH PRICES. Those prices received at principal fishery markets by primary wholesalers (processors, importers, and brokers) for customary quantities, free on board (f.o.b.) warehouse.

Federal Inspection Marks for Fishery Products

SEAFOOD INSPECTION PROGRAM. (NOAA) oversees fisheries management in the United States. Under authority in the 1946 Agricultural Marketing Act, the NOAA Seafood Inspection Program provides inspection services for fish, shellfish, and fishery products to the industry. The NOAA Seafood Inspection Program is often referred to as the U.S. Department of Commerce (USDC) Seafood Inspection Program and uses marks and documents bearing the USDC moniker. The NOAA Seafood Inspection Program offers a variety of services which assure compliance with all applicable food regulations. The Program offers sanitation inspection as well as system and process auditing in facilities, on vessels, or other processing establishments in order to be designated as official establishments. Product quality evaluation, grading and certification services are available on a product lot basis. Certain products may be eligible to bear official marks, such as the U.S. Grade A, Processed Under Federal Inspection (PUFI) and Lot Inspection. All edible product forms ranging from whole fish to formulated products, as well as fish meal products used for animal foods, are eligible for inspection and certification. The U.S. Department of Agriculture recommends that USDC inspected fishery products be purchased for its food feeding programs. The **USDC PARTICIPANTS LIST FOR FIRMS, FACILITIES AND PRODUCTS** provides a listing of products and participants who contract with USDC.

USERS OF INSPECTION SERVICES. The users of the voluntary seafood inspection service include vessel owners, processors, distributors, brokers, retailers, food service operators, exporters, importers, and those who have a financial interest in buying and selling seafood products. These services can be provided nationwide, in U.S. territories, and in foreign countries. The program is a competent authority within the U.S. Government for issuance of health certificates for export of fish and fishery products to foreign countries. The official government forms and certificates issued by USDC inspectors are legal documents recognized in any U.S. court.

USDC INSPECTION MARKS. These marks designate the level and the type of inspection performed by the federal inspector. The marks can be used in advertising and labeling under the guidelines provided by the Seafood Inspection Program and in accordance with federal and state regulations regarding advertising and labeling. Products bearing the USDC official marks have been certified as being safe, wholesome, and properly labeled.

US GRADE A MARK. The U.S. GRADE A mark signifies that a product has been processed under federal inspection in a sanitarily approved facility and meets the established level of quality of an existing U.S. grade standard. The U.S. Grade A mark indicates that the product is of high quality, uniform in size, practically free from blemishes and defects, in excellent condition and possessing good flavor and odor.

PROCESSED UNDER FEDERAL INSPECTION MARK. The PUFI mark or statement signifies that the product is certified to be safe, wholesome and properly labeled, conforms to quality and other criteria in the approved specification, and has been officially inspected in a participating establishment under Federal inspection.

LOT INSPECTED MARK. The USDC Lot Inspected mark identifies products that were officially sampled and inspected to conform to an approved specification or criteria. This mark may be used on retail packages and packaging provided the label and specification are approved.

RETAIL MARK. Participants qualify to utilize the Retail Mark by contracting for sanitation services and associated product evaluation. Use of the retail mark gives retail firms the opportunity to advertise on banners, logos, and/or menus that their facility is recognized by the USDC for proper sanitation and handling of fishery products.

USDC HACCP MARK. The USDC HACCP-based service is available to all interested parties on a fee-for-service basis. Label approval, record keeping and analytical testing are program requirements. An industry USDC-certified employee trained in HACCP principles is also required for each facility/site in the program. Compliance ratings determine frequency of official visits. Benefits to participants include increased controls through a more scientific approach, use of established marks, increased efficiency of federal inspection personnel, and enhanced consumer confidence. The USDC has made available a HACCP mark and a "banner" to distinguish products that have been produced under the HACCP-based program. The HACCP mark may be used alone or in conjunction with existing grade marks to distinguish that the product was produced under the HACCP Quality Management Program. Participants receive the marketing benefits of using the HACCP mark on brochures, banners, and company labels.
